

Setting up policy rules for USDC Gateway

2 min read

Without the correct policy rules in place, USDC Gateway deposits might get blocked by Fireblocks's policy, even if your Gateway is properly activated. This article walks you through setting up the exact rules required, based on your workspace configuration.

Withdrawals

Withdrawals from a Gateway-activated vault to any destination adhere to the same policy rules as any standard transfer in Fireblocks. No special configuration is required beyond your existing withdrawal rules.

Deposits

The first deposit for each USDC-supported blockchain involves two transactions:

- **Approve:** a one-time on-chain approval per blockchain that allows the USDC contract to interact with the Gateway.
- **Transfer:** the actual USDC deposit into the Gateway.

The exact configuration depends on your workspace policy setup and whether the deposit automation feature is enabled. When it is enabled, you will also need a dedicated policy rule with the initiator set to a service user called **USDC Gateway Depositor**.

Note: whichever configuration applies to you, the USDC Gateway Depositor can only *initiate* a transaction, but not *sign* one. Any rule involving it must designate a separate user with signing privileges for this purpose, or automated deposit transactions will fail with a **blocked by policy** verdict.

If the Gateway deposit automation feature is configured (upon activation)

We recommend enabling deposit automation so Gateway deposits are initiated automatically rather than requiring manual action. If it is enabled on your workspace, add a dedicated policy rule in addition to whichever of the rules below apply to your address policy setup:

- **Initiator:** set to **USDC Gateway Depositor**.
- **Source** and **Destination:** include the vaults where Gateway is activated.

- **Signer:** designate a user with signing privileges for the rule (since the USDC Gateway Depositor cannot sign transactions).

Without these settings, automated deposit transactions will fail with a **blocked by policy** verdict even if your other rules are correct.

Setting up deposit rules

If One Time Address (OTA) is enabled

Make sure you have a vault-to-vault rule for any Gateway-activated vault(s):

- An **Approve** rule
- A **Transfer** rule

If transaction to a whitelisted Address is preferred

Add two rules instead:

- **Approve rule:** whitelist the Gateway contract address for every USDC blockchain you aim to interact with (see tables below).

The screenshot shows a mobile application interface for managing USDC contract addresses. At the top, there's a header 'USDC Contract addresses' with a close button (X). Below it, the title 'Add whitelisted address' is displayed. The main area features a back arrow, a USDC logo, and the text 'USDC'. Under the 'Address' label, there is a text input field containing the hexadecimal address '0x0077777d7EBA4688BDeF3E311b846F25870A19B9'. To the right of the input field is a small 'X' icon for clearing the text. At the bottom, there are two buttons: 'Cancel' and 'Add address' (which includes a checkmark icon).

To whitelist a USDC contract from the Fireblocks console:

- Go to **Whitelisted Addresses** in the left panel
- Select **Add > Whitelisted Address Wallet** (Type can be Internal or External)
- Add the required USDC contracts and asset IDs (see tables below)
- Approve all whitelisted addresses per your workspace's admin quorum
- Add the whitelisted address wallet to your policy rule to allow USDC Gateway deposits
- **Transfer rule:** a standard vault-to-vault transfer rule from the Gateway-activated vault to the Gateway destination. Note that when deposit automation is used, the initiator of this transaction is the **USDC Gateway Depositor** service user.

Mainnet USDC Gateway Assets

The Mainnet USDC Gateway Contract Address to whitelist:

0x77777777Dcc4d5A8B6E418Fd04D8997ef11000eE

For a table of the supported Mainnet assets, see [here](https://support.fireblocks.io/hc/en-us/articles/27420202963612-USDC-Gateway-Prerequisites-and-Setup-Guide#h_01KREPP3E4KPT0ZC2VDMQKWJ4) (https://support.fireblocks.io/hc/en-us/articles/27420202963612-USDC-Gateway-Prerequisites-and-Setup-Guide#h_01KREPP3E4KPT0ZC2VDMQKWJ4).

Testnet USDC Gateway Assets

The Testnet USDC Gateway Contract Address to whitelist:

0x00777777d7EBA4688BDeF3E311b846F25870A19B9

For a table of the supported Testnet assets, see [here](https://support.fireblocks.io/hc/en-us/articles/27420202963612-USDC-Gateway-Prerequisites-and-Setup-Guide#h_01KREPP3EA18TPP7DR48N8PATK) (https://support.fireblocks.io/hc/en-us/articles/27420202963612-USDC-Gateway-Prerequisites-and-Setup-Guide#h_01KREPP3EA18TPP7DR48N8PATK).
