Blockchains SLA

Updated 1 year ago

Fireblocks currently has three separate node types:

1. Nodes hosted by Fireblocks.
2. Nodes hosted by certified vendors.
3. Nodes hosted by various blockchain foundations.

Other than nodes we host, we currently support a few certified node vendors, which have undergone our vetting process and are considered trusted. For both our hosted nodes and these vendors' nodes, we are committed to a total uptime SLA of 99.9%. For all other foundation-provided node vendors, we have no SLA since we cannot guarantee their blockchain's operational performance.

The following blockchains are included in our SLA (note that this is a dynamic list which periodically updates):

- Algorand
- Arbitrum
- Avalanche
- Base
- Bitcoin
- Bitcoin Cash
- BitcoinSV
- BSC (Binance Smart chain)
- Cardano
- Celo
- Cosmos
- Chiliz
- Dash
- Dogecoin
- eCash
- Ethereum
- Ethereum Classic
- Fantom
- Kusama

 Fireblocks Help Center

/

- Polkadot
- Ripple
- Ronin
- Solana
- Stellar
- Tezos
- Ton
- Tron
- Zcash
- ZKsync

When a certain blockchain is not included in our SLA, outage events caused by that blockchain's node instability will not count towards the platform's SLA.
