Manage your 2FA

Updated 2 days ago

Two-factor authentication (2FA) is required for all users to sign in to the Fireblocks Console. This article covers setting up 2FA on a new device, resetting your 2FA if you lose access, and migrating your 2FA to a new device.

Fireblocks supports any Time-based One-Time Password (TOTP) authenticator app, such as Google Authenticator, Microsoft Authenticator, LastPass Authenticator, or Yubico Authenticator.

Set up 2FA

To set up 2FA:

1. Install a TOTP authenticator app on your mobile device.
2. Go to the [Fireblocks Console Login](#) page and enter your login details. A 2FA QR code displays.
3. In your authenticator app, scan the QR code to add Fireblocks as a new account.
4. Enter the 6-digit code from your authenticator app into the Fireblocks Console.

After setup, enter the 6-digit code from your authenticator app each time you sign in to the Fireblocks Console.

Note: If your 2FA code is rejected, verify that the time is correct on both your computer and mobile device. TOTP codes are time-sensitive.

If you're completing initial user setup, [return to user setup](#) for the next onboarding step.

Reset your 2FA

If you lose access to your 2FA device, your workspace Owner must reset your 2FA before you can sign in again.

1. Contact your workspace Owner to request a 2FA reset.
2. After the Owner resets your 2FA, you'll receive a confirmation email.
3. Sign in to the Fireblocks Console and set up 2FA again as described above.

 Fireblocks Help Center

/

- When you set up a new device, use your authenticator app to export or transfer your account to generate a QR code for your Fireblocks account. For example, in Google Authenticator: sidebar menu > Transfer accounts > Export accounts.
2. On your new device, install the same authenticator app and scan the QR code from your old device.
 3. Sign in to the Fireblocks Console using a code from your new device to confirm setup.
