One-Time Address (OTA) feature

Updated 11 days ago

The One-Time Address (OTA) feature allows you to transfer assets to non-whitelisted addresses in your Fireblocks workspace.

Unlike whitelisted addresses, each one-time address does not require approval by the Admin Quorum in order to transfer funds to it. However, allowing the feature requires approval from the workspace Owner or an authorized Approval group.

Warning

This feature poses security risks. Fireblocks recommends setting up a [Policy](#) before allowing one-time address transactions. You can use Policy rules to limit exposure, such as:

- Restricting one-time address transfers only to certain preselected users, user groups, and vaults
- Requiring approval for one-time address transfers above a certain threshold

Allowing One-Time Address transactions

1. In your Fireblocks Console, go to **Settings > General**. Under **One-time address transactions**, select **Allow**.
2. On the confirmation dialog, select **Allow**.

After the request is approved and the appropriate Policy rules are set, one-time address transactions will become available.
