Removing a Ripple (XRP) trust line

Updated 5 months ago

According to the official [XRPL documentation](#), you can remove a trust line and recover your deposit when the following conditions are met:

- The reserve balance for the trust line must be 0.2 XRP.
- The account's parameters (flags) must be at default values.

Fireblocks automatically creates trust lines using default flags when you use the [tokenization engine](#) or [request to add an XRPL asset to your workspace](#). Therefore, if the wallet's balance falls below the minimum reserve requirement (1 XRP for the base wallet plus 0.2 XRP for each trust line), trust lines may be automatically deleted on-chain. XRPL requires a minimum balance of 1 XRP to maintain an account independent of any trust lines.

Once a trust line is deleted, its reserve requirement is removed. Trust lines can be added back to an account at any time.
