Cold Wallet Overview

About Fireblocks Cold Wallet

Before you begin

- Creating a Fireblocks Cold Wallet workspace requires scheduling onboarding time. For more information, contact your [Customer Success Manager](#).
- The terms *Cold Wallet*, *cold storage*, and *offline signing* may be used interchangeably.

Overview

Fireblocks Cold Wallet allows you to meet your regulator or insurer's strictest policies by signing crypto transactions using keys that are always held offline in cold storage.

Fireblocks delivers the most secure cold storage solution in the industry. Our secure MPC implementation prevents any device from being a single point of failure. Cold Wallet devices are air-gapped and completely disconnected from the internet and any other device. No operations require physical connections.

To ensure ease of use and speed of operations despite the device being offline, Fireblocks' solution uses a single round of communication between the Cold Wallet device and other online co-signers.

This process uses our MPC-CMP implementation. You submit a transaction on the Fireblocks Console, sign it with the Cold Wallet device, and send the signed transaction back. The Fireblocks Cold Wallet mobile app communicates with Fireblocks Console using a QR Animation.

/

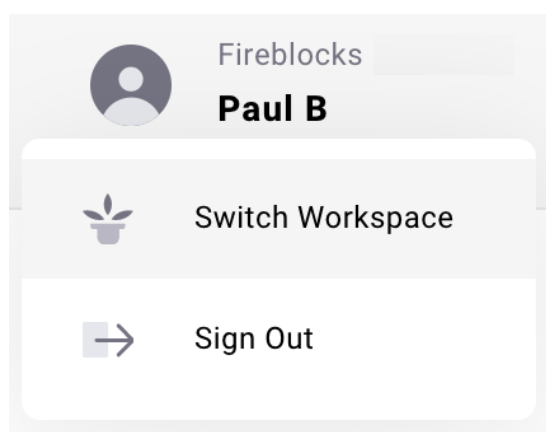

2. Select a pending transaction to display a QR animation with the relevant data encoded.
3. Use the Fireblocks Cold Wallet app on your Cold Wallet device to scan the QR animation.
4. Confirm transaction signing using the Fireblocks Cold Wallet app.
5. Scan the resulting QR animation from your Fireblocks Cold Wallet app using your computer to complete the signature.

For detailed steps and a demo video, see [Signing Transactions Using Your Cold Wallet Device](#).

Workspaces

Workspaces are designated as either Cold Wallet or Hot Wallet before creating them. You receive a Cold Wallet workspace only if your contract specifically includes it.

If you choose to use a combination of workspaces, you can switch between your Hot and Cold Wallet workspaces on the Fireblocks Console without signing out. Select **Switch Workspace** from the avatar menu.

The most efficient way to transfer assets between Hot and Cold Wallet workspaces is by using the [Fireblocks P2P Network](#).

Comparing hot and cold workspaces

Definitions of cold storage and hot storage can differ. Here are some Fireblocks-related terms to help differentiate between the types of storage available:

- *Hot workspace* refers to a workspace where transactions may be initiated and signed automatically using an online connection. For example, a retail workspace

... stricter security procedures, including workspace-specific Policies. You sign transactions using offline, air-gapped devices.

	Fireblocks Cold Wallet	Fireblocks Hot or Warm Wallet
Security	✓ Device never connects to the internet ✓ Key partitioning using MPC ✓ Securely encrypted hardware enclave ✓ Verification using biometrics and PIN code	✓ Key partitioning using MPC ✓ Securely encrypted hardware enclave ✓ Verification using biometrics and PIN
Approval & Signing Speed	Medium 1. Scan transaction details 2. Approve transaction details 3. Scan back the signed transaction	Fast 1. Receive a notification 2. Approve transaction details 3. Automatically send the signed transaction to Fireblocks Ultra-fast Approve and sign transactions programmatically using the API Co-Signer
Communication with cloud co-signers	Send and receive data using QR animations	HTTPS over SSL
Supported mobile platforms	iOS Fireblocks Cold Wallet app	iOS and Android Fireblocks mobile app (online)

Best practices for workspace combinations

For the highest security and operational efficiency, Fireblocks recommends using multiple workspaces with a combination of hot and cold wallets.

- Maintain cold and hot workspaces where about 90% of all funds are held in Cold Wallet-managed vault accounts, and the remaining 10% is held in hot wallet-managed vault accounts.
- Use online signing for day-to-day operations. Use a Cold Wallet for operations that do not require frequent interaction, such as investments and staking.
