Cold Wallet

Cold Wallet User Management

Adding API keys to a Cold Wallet workspace

Requesting an API key

You cannot add API keys to Cold Wallet ("cold") workspaces from the Fireblocks Console. To add an API key to a cold workspace, [submit a request to Fireblocks Support](#) to add an API user to a cold workspace.

You must include the generated CSR file for the API key in your request. The cold workspace's Owner must also indicate they approved the request.

API key user roles in cold workspaces

You can assign the following [user roles](#) to API keys in a cold workspace:

- Non-Signing Admin
- Approver
- Editor
- Viewer

For more information about user role best practices, refer to our [Best practices for choosing user roles](#) article.

Pairing the API key to your workspace

After Fireblocks Support approves your request and adds the API key to your cold workspace, you can [retrieve the pairing token and pair the API key](#) just as you would in a hot workspace.
