Cold Wallet Workspace Management

Cold Wallet Enhanced Console Experience

Note

The enhanced Cold Wallet console experience is currently rolling out to Cold Wallet workspaces. To enable this feature for your workspace, contact your Customer Success Manager.

The enhanced Cold Wallet console provides an improved user experience for managing offline signing and approval requests. This feature also makes it easier to track, filter, and process transactions and configuration changes that require signing with your Cold Wallet mobile device.

What's New

The enhanced console experience introduces:

- **Unified Recent Activity:** All transactions and approval requests that require your offline signature now appear in the Recent Activity panel
- **Full Transaction Context:** View complete transaction details before scanning the QR code
- **Configuration Change Visibility:** Approval requests for workspace configuration changes now appear with full context
- **Better Filtering:** New filter options to quickly find the transactions or approvals you need to sign

Requirements

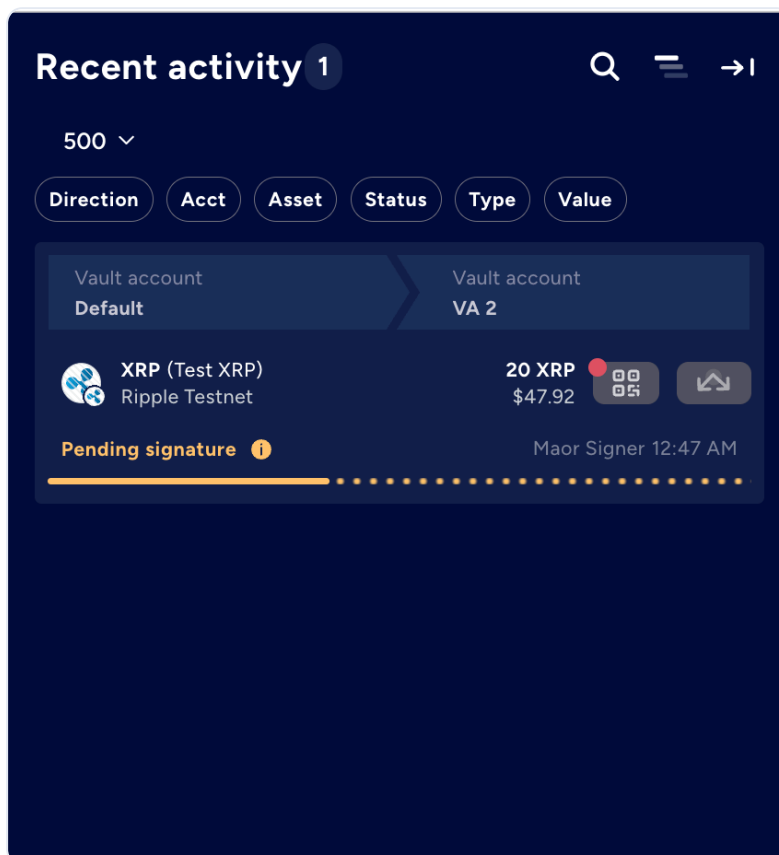

To use the enhanced Cold Wallet console experience, your workspace must have the enhanced Cold Wallet UI enabled. To enable the enhanced UI, contact your Customer

Transactions that require offline signing by you now display a **QR code icon** in the Recent Activity panel.

Before: You had to navigate to a separate Offline Signing panel to find signing requests, with limited context about what you were signing.

Now:

All transactions requiring your signature appear directly in Recent Activity with a QR icon.

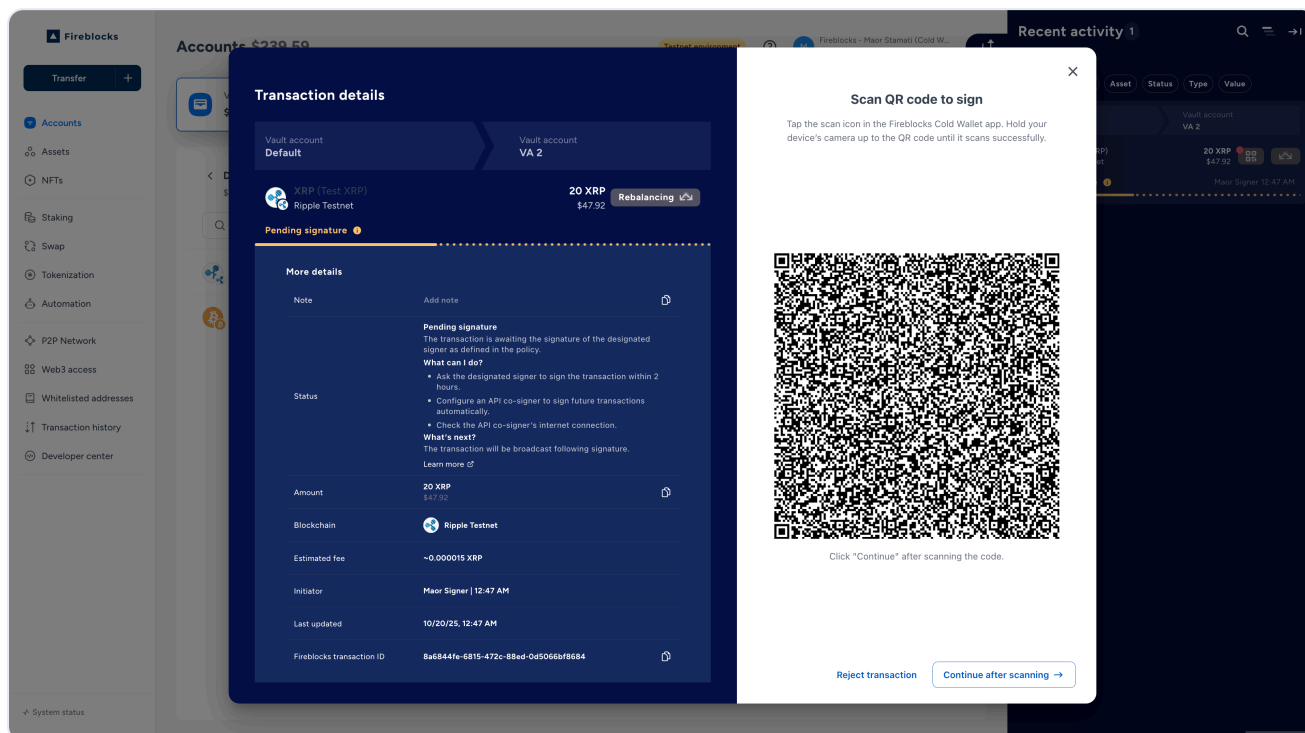

To sign a transaction, follow these steps:

1. Click on the transaction card or **QR icon**. A dialog will open showing the following information:
 - Full transaction details (amount, asset, source, destination, fees, etc.)
 - Transaction status and notes

Transaction Signing Workflow

1. **Identify signing requests:** Look for the QR code icon on transaction cards in Recent Activity.
2. **Review transaction details:** Click the card to see complete transaction information.
3. **Scan:** Click the **Scan** icon in the Fireblocks Cold Wallet app.
4. **Sign:** Hold your device's camera up to the QR code until it scans successfully.
5. **Confirm:** Click **Continue after scanning** once you've signed on your device.
6. **Transmit the signature:** Hold up the QR code displayed on your device to the computer's camera.

Improved Configuration Change Approvals

Viewing Approval Requests

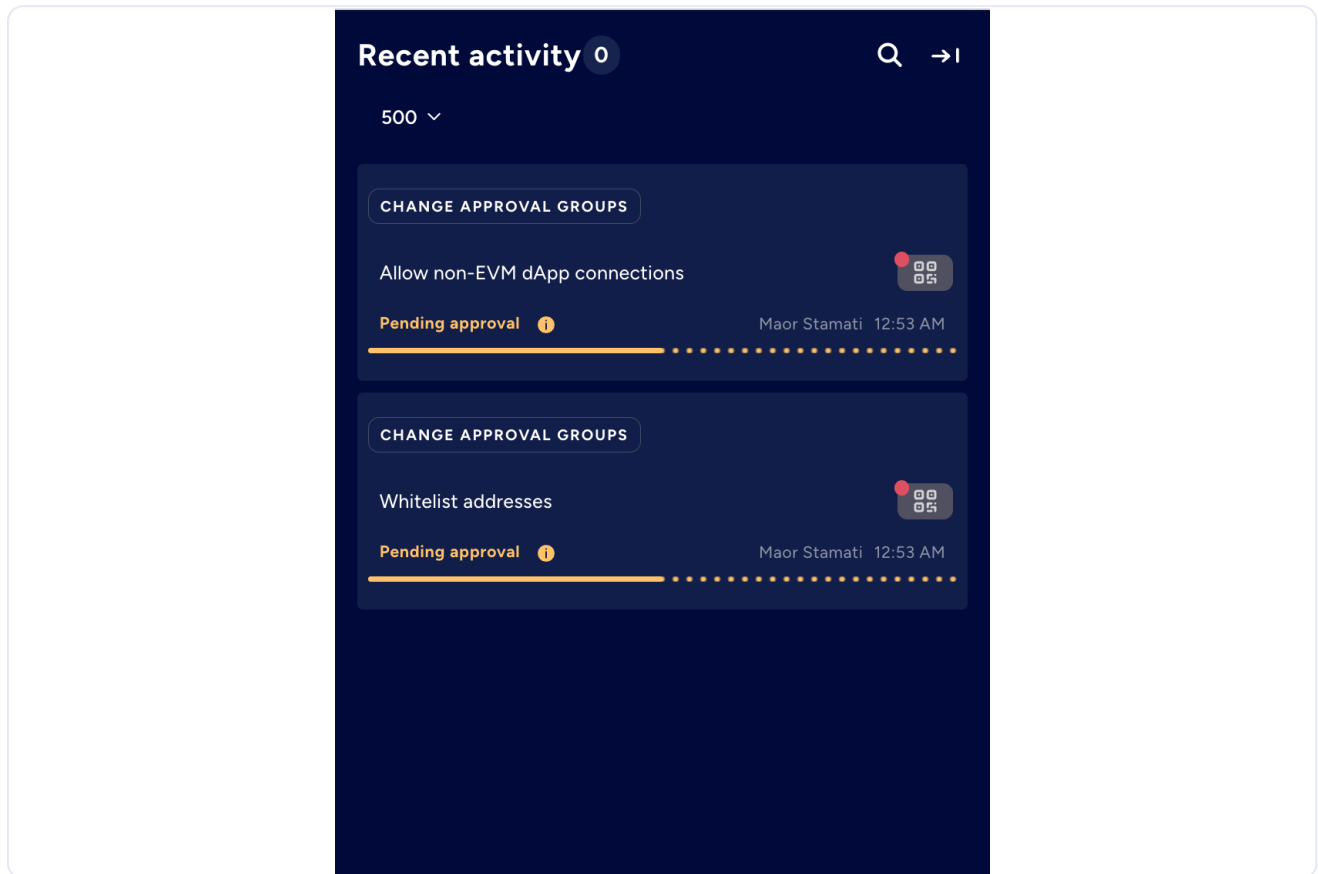

Configuration change approval requests, such as changes to approval groups for creating backups, editing Policies, or managing network connections, now appear in the Recent Activity panel alongside transactions.

approval request appears in the console, indicating an approval is pending. Once the change is approved, the change is implemented.

If you need to approve offline, a QR icon appears on the card.

To complete an approval request offline, follow these steps:

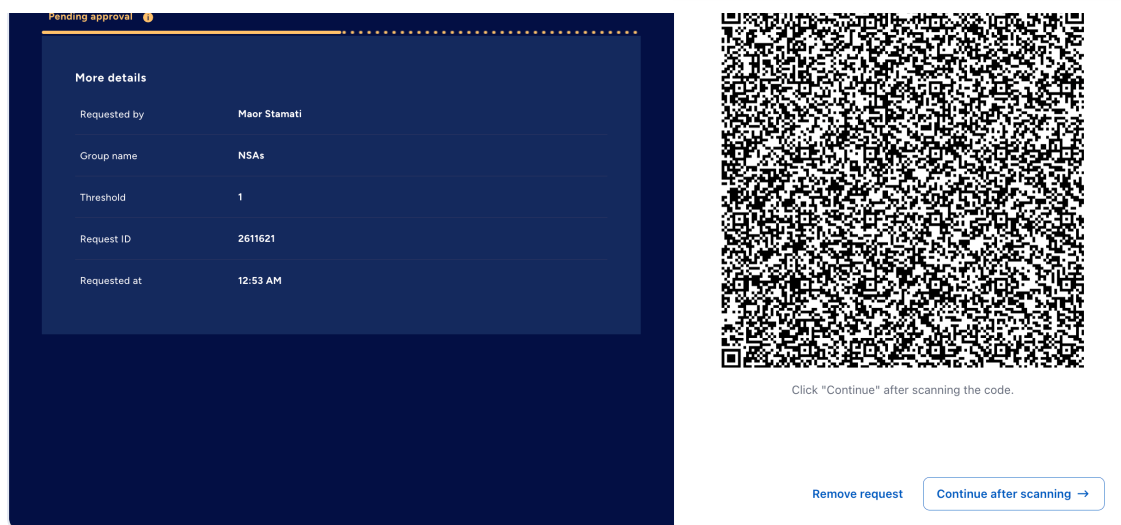

1. Click the card to see:

- The type of configuration change being requested
- Which settings are being modified
- Who initiated the request
- Who has already approved
- Full details of the proposed changes

Fireblocks Help Center

2. Scan the QR code to approve on your Cold Wallet mobile device.

Common Approval Types

You may see approval requests for:

- **User group modifications:** Creating and managing user groups in the workspace
- **Approval group modifications:** Updating approval group membership or thresholds
- **MPC key provisioning:** Approving MPC keys for new Signers in the workspace
- **Network configuration:** Adding network connections or setting routing preferences

Filtering and Finding Requests

Using the Type Filter

A new **Type** filter in the Recent Activity panel helps you quickly find what you're looking for:

1. Click the **Type** filter button
2. Choose:
 - **Transactions:** Show only transfer transactions
 - **Approvals:** Show only configuration change approval requests

Self-Service Features (Early Availability)

Early Availability: The features described in this section are currently in *Early Availability* and require coordination with Support or your Customer Success Manager to enable.

Available Self-Service Features

Once enabled, you can manage the following features directly from the Console without opening support tickets:

User and Approval Group Management

- Create and manage user groups in the Console
- Add users to or delete users from groups
- Modify approval group assignments
- Change approval thresholds

Policy Editing

- Edit your Policy rules directly in the Console
- Publish policy changes without requiring owner approval
- Changes require approval from Non-Signing Admins instead of the workspace owner

In-House Key Backups

- Create in-house backups from the Console
- Approval process managed by Non-Signing Admins
- Workspace owner still initiates, downloads, and verifies the backup package

Peer-to-Peer Network

- Create network profiles and connections from the Console
- Set network deposit routing preferences
- Changes require approval from Non-Signing Admins

IP Allowlist Management

- Add and remove IP addresses from the Console
- Manage API access restrictions self-service

How It Works

Self-service features work by removing the mandatory workspace owner approval from specific approval groups and assigning those approval responsibilities to Non-Signing Admin users instead.

Enabling Self-Service Features

To enable these features for your workspace:

1. Verify requirements:

- Workspace owner device runs Cold Wallet app version 2.1.0 or higher. This update is necessary for the owner's Cold Wallet app to render the approval requests correctly.
- Enhanced Cold Wallet UI is enabled for your workspace
- You have at least one Non-Signing Admin user in your workspace

2. **Contact Support or your Customer Success Manager:** Reach out to request enablement of specific self-service features.

3. Complete enablement steps:

Support will guide you through the following steps:

- Enabling user group management
- Creating a user group with Non-Signing Admins only
- Modifying the feature-specific approval approval groups
- Enabling the self-service features in your workspace
