Fireblocks Recovery Utility Release Notes

Overview

The following outlines updates to the Recovery Utility tool, including enhancements, new features, bug fixes, security patches, and more, to improve its overall performance and functionality.

To calculate the SHA-256 hash:

1. Download the relevant version's ZIP file.
2. Open Terminal on your device.
3. Run the following command, replacing "path/to/zip/file" with the actual file path:

```
shasum -a 256 "path/to/zip/file"
```

4. The output will look like this:

```
efb7c9e026fe3aa7998efc4dd34b89df49e395331a992dad9a41d064daa87ad3 Rec
```

5. The following SHA-256 represents the first part of the output:

```
efb7c9e026fe3aa7998efc4dd34b89df49e395331a992dad9a41d064daa87ad3
```

/

v.1.2.0

- Improved BTC fee estimation.
- Added Jetton support.
- Added support for all ERC20 tokens globally supported by Fireblocks.

Note

- ERC-20 tokens should be manually added to recovered vault accounts in the recovery tool as currently exporting vault accounts from the Console does not include addresses and derivations of ERC20 tokens.
- Custom ERC20 tokens added through tokenization are not supported by the recovery tool.

SHA-256 Checksums

macOS build

2d23e30aa9a2333bed1fb52a8f269f28f69587c3449c4c13a67127e414d64b25

Ubuntu build

7197bafc938d406fba48e51f47f42df5593bfc26d25e7719016e2a8287b84b89

v.1.1.0

Added support for TON and TON test tokens.

v1.0.0

- v1.0.0 Release (out of Early Access, and the official *first* stable version).
- Support for macOS 15.
- Added support for custom RPCs.
- Support for ETH Holesky, Celestia (Testnet), and CoreDAO (Testnet).
- Fixed ATOM and ETC withdrawals.

 Fireblocks Help C

/

v0.5.0

- Recover your Non-Custodial Wallet (NCW) key shares.
 - Support for more blockchains: BSV, DASH, LTC, and Doge chains.
 - Manual extended key input is allowed instead of going through the full recovery process.
 - New recovery relay that alerts you when a new version is available.
 - Resolved Ubuntu launch failure.
 - Improved CSV loading, where the utility now handles cases where the derivation path is missing in the CSV file.
 - Improved error handling that includes more informative error messages.
 - Updated the utility's dependencies to address security vulnerabilities.
-

v0.4.0

- Enhancements to Solana transfers and connections.
 - Resolved Bitcoin testnet address derivation and transfer issues.
 - User interface improvements to display asset IDs on balance query results.
 - Corrected the issue preventing negative balances on EVMs.
 - New features for public key usage and test IDs.
 - Updated Recovery Utility and asset configuration.
 - Removed unnecessary pauses in the test execution.
 - Separated test assets into mainnet and testnet.
-

v0.3.5

- Implemented error handling where x-key recovery failed to generate a key.
- Resolved the issue where the tool became stuck during balance queries for Polkadot, Kusama, and Westend.
- Updated EVMs to include chain ID in the transaction creation process.
- Resolved the issue to identify all testnet assets properly.
- Enhanced functionality to expand QR codes for improved scanning.
- Modified download logs to display logs directly.

/

v0.3.3

- Resolved the issue so that log files reset upon startup.
- Comprehensive changes were made to the logging system.
- Resolved issues related to deployment type settings.
- Introduced a new feature of tooltips for wallets.
- Updated functionality for transferring property for assets.

v0.3.2

- Resolved the issue with the EVM transactions relay system.

v0.3.1

- Resolved the issue with the JSON key share.

v0.2.0

- Corrected problems with licensing information in the footer.
- Resolved issues with Python and development servers.
- Removed Copy Button from the withdrawal PIN field.
- User interface improvements for key derivation.
- Configured updates for the copying function.
- Added ability to select and delete wallets.
- Organized and refined the saved requests collection.
