Policy rules for minting and burning tokens

Updated 5 months ago

Overview

When creating **Mint** and **Burn** Policy rules, you need to configure certain [rule parameters](#) so that these transactions correctly match them:

- **Source:** Enter the name of the specific vault account that contains the address wallet configured as the smart contract owner, minter, or burner.
- **Destination:** Enter the name of the specific vault account where the token will be minted or burned.
- **Asset:** Enter the specific asset you want to mint or burn.
- **Amount Range:** Enter the minimum and maximum number of tokens that can be minted or burned. Since minting and burning rules are asset-specific, you can enter the token's native value, such as **50** to **100** TTTT tokens.

In the Fireblocks Console, a Mint rule might look like the following, but separated from Burn and other Policies:

The screenshot shows the Fireblocks Console interface. At the top, there's a header with the user's name 'Liam Morgan' and a workspace indicator. Below the header, there's a navigation bar with tabs for 'Overview', 'Transfer', 'Approve', 'Mint', and 'Burn'. The 'Mint' tab is selected. The main content area displays a 'Mint policy' card. The card includes a title 'Mint policy', a subtitle 'Published by Liam Morgan on May 18, 2025 at 20:55', and a table with the following data:

#	Name	Initiator	Signer	Source	Destination	Amount	Asset	Action
01	Limit transfer from vault to vault \$25,000	Anyone	Initiator	Vault - Default	Vault - Third Vault Acco	Unlimited USD per transaction	All	Block
