Travel Rule Post-Screening Policy

Note

The Travel Rule integration is a premium, opt-in feature that requires an additional purchase. Contact your Customer Success Manager for more information.

Overview

The Travel Rule Post-Screening Policy pre-determines what action to take on a screened transaction based on the screening result returned by Notabene.

Fireblocks recommends using your Travel Rule provider as a resource when determining what actions to take against suspicious transactions.

Default policy vs. custom policy

The default Post-Screening Policy accepts, rejects, freezes, or sends alerts for transactions based on their Notabene screening status. The default policy operates on a first-match basis rule set. This means the first rule that matches the transaction's parameters is applied to the transaction and the action specified in the rule is performed.

Default policy

Alternatively, you can replace the default AML Post-Screening Policy with a custom policy that suits your business's needs and risk strategies. Custom policies also operate on a first-match basis rule set.

Building your Post-Screening Policy

You can create and customize your Travel Rule Post-Screening Policy using the steps below.

CSV Policy Upload

To get started:

1. Download the [Transaction Post-Screening Policy template](#) and read the instructions on the Instructions tab.
2. Use the following [rule parameters](#) to build and customize your Travel Rule Post-Screening Policy rules.

Alternative: Compliance Policy Editor (Early access)

Important:

This feature is not yet available to all customers. Contact your [Customer Success Manager](#) to learn more.

To get started, in your Fireblocks Console:

1. Navigate to **Policies > Compliance policies > AML**.
2. Connect to your provider by following the prompts.
3. Once connected, you can begin right away with the default screening rules that are automatically enabled.
4. You can also use the [Policy Editor](#) and [advanced configuration settings](#) to build your custom AML Screening Policy rules following the [rule parameters](#) below.

Rule parameters

Direction

This is the transaction's source, such as a vault account or exchange account. You can enter one of the following:

- Inbound

This is the transactions Travel Rule status as determined by Notabene. You can enter one of the following:

- **Completed:** Screening completed successfully.
- **Pending:** Screening is still in progress.
 - **Saved:** A transaction is created and saved, but is not sent, following one of the types:
 - Below the established value threshold (BELOW_THRESHOLD)
 - A transfer to or from a non-custodial wallet (NON_CUSTODIAL)
 - An internal transfer within the same VASP
- Regarding the Notabene integration, when a transaction is marked with a **SAVED** status, Fireblocks sets the screening status to **Completed**. In this case, the Travel Rule information is stored for record-keeping purposes only and not sent.
- **Rejected:** Screening was rejected because the Virtual Asset Service Provider (VASP) does not have the destination address or the beneficiary VASP declined your request.
- **Failed:** Screening failed. Screenings can fail for various reasons, such as incomplete Travel Rule data or an internal server error.
- **Blocking Time Expired:** The amount of time defined for freezing and blocking transactions while waiting for a status has expired. The blocking time can be different for incoming and outgoing transactions depending on your [advanced settings](#).
- **Canceled:** Screening was canceled. For outgoing transactions, you can choose whether to proceed with the transaction.
- **Any status**

Amount

The amount a transaction must be greater than to trigger the rule. You can enter the amount as the asset's United States dollar (USD) equivalent or a specific quantity of an asset.

Action

This is the action Fireblocks performs when the rule is triggered. Select one of the following actions:

- **Accept:** The action approves the transaction.
 - For incoming transactions, funds become immediately spendable within the wallet.

frozen funds cannot be spent until an Admin-level user unfreezes them via the [Console](#) or [API](#).

- For outgoing transactions, Fireblocks prevents the transaction from being sent. Admin-level users can bypass the policy and send rejected transactions.
- **Alert:** This action approves the transaction and generates an alert on the Audit Log and an authorizer’s mobile device. The alert contains the transaction’s Travel Rule status. [Learn more about configuring Travel Rule event notifications](#).
- **Freeze:** This action only applies to incoming transactions. Choose this action to stop the transaction and freeze the transaction's funds in the destination wallet. The wallet will continue functioning normally, but the frozen funds cannot be spent until an Admin-level user unfreezes them via the [Console](#) or [API](#).
- **Wait:** This action only applies to transactions in Pending status. Choose this action to keep transactions in Pending status for up to four hours or until the transaction screening completes, whichever comes first. If the status hasn’t changed after four hours, the screening is canceled.
- **Cancel:** This action only applies to outgoing transactions in Blocking Time Expired status. Choose this action to cancel the transaction.

Example policy

Important

We provide you with an example of a Travel Rule Post-Screening Policy below to demonstrate its capabilities and formatting. However, we will not provide a policy for you to copy and use.

If you need assistance building a policy, we recommend contacting Notabene. They may have compliance experts as part of their team to assist you.

Rule No.	Direction	Travel Rule Status	Amount	Asset	Action
1	Any	Completed	Any	Any	Accept
2	Any	Pending	Any	Any	Wait

		expired			
6	Outbound	Blocking Time Expired	Any	Any	Accept
7	Outbound	Canceled	Any	Any	Reject
8	Any	Canceled	Any	Any	Alert
9	Inbound	Failed	Any	Any	Freeze
10	Inbound	Rejected	Any	Any	Freeze
11	Inbound	Blocking Time Expired	Any	BTC	Freeze
12	Inbound	Blocking Time Expired	Any	Any	Accept

1. Accept all transactions in Completed status.
2. Wait on all transactions in Pending status.
3. Reject outgoing transactions in Failed status.
4. Reject outgoing transactions in Rejected status.
5. Cancel outgoing transactions in Blocking Time Expired status that are greater than \$2000.
6. Accept all other outgoing transactions in Blocking Time Expired status.
7. Reject outgoing transactions in Canceled status.
8. Generate alerts for all transactions in Canceled status.
9. Freeze incoming transactions in Failed status.
10. Freeze incoming transactions in Rejected status.
11. Freeze incoming BTC transactions in Blocking Time Expired status.
12. Accept all other incoming transactions in Blocking Time Expired status.

Uploading your Post-Screening Policy - CSV Policy

To upload your workspace's Travel Rule Post-Screening Policy, go to **Settings** >

Compliance > Travel Rule. Then select **Change policy**  in the Post-screening row, and upload the template with your custom policy.
