# About the Provider Network

Updated 13 days ago

## Overview

The [Fireblocks provider network](#) is part of the Fireblocks P2P Network. It enables you to securely and compliantly interact with third-party financial service providers and platforms.

Through the provider network, you can:

- Monitor account balances held with providers
- Deposit and withdraw funds
- Transfer funds between provider account types
- Collateralize assets using [Off-Exchange](#)
- Trade crypto assets and stablecoins
- Convert between fiat currencies and stablecoins using [on- and off-ramps](#)

All provider network operations can be performed using the Fireblocks Console or API.

---

## How you access provider services

You may access provider services using the Fireblocks Console or Fireblocks API.

After a provider account is connected, you can:

- Monitor balances across main and trading accounts
- Transfer funds between provider accounts, Fireblocks vault accounts, and other destinations
- Convert digital assets and fiat currencies using supported on- and off-ramps
- Track transaction status
- View and audit transaction history

Using the Off-Exchange solution, you can trade on provider platforms while retaining control of your funds within your Fireblocks vault.

## Crypto trading

Manage balances on trading platforms such as exchanges and OTC desks, securely hold assets, deposit and withdraw funds, and trade on both centralized and decentralized platforms.

## Payments

Access global FX and fiat on and off-ramp providers to support payment flows and treasury operations.

## Token distribution

Distribute digital assets such as stablecoins and tokenized securities to institutional and retail participants.

---

# Core concepts

## Providers

All interactions on the provider network involve a third-party provider.

Providers can include:

- Centralized exchanges and OTC desks
- Custodians
- Fiat on- and off-ramp providers
- Decentralized platforms such as decentralized exchanges, lending platforms, and bridging protocols

[Providers integrate with Fireblocks](#) to expose supported services and capabilities to Fireblocks customers.

## Connected accounts

Most provider network operations are performed in the context of a connected account.

This applies primarily to centralized providers, where accounts are required for:

- Managing balances
- Using Off-Exchange
