Account balances

Updated 5 months ago

This article focuses primarily on Fireblocks Vault account balances

If you want to learn more about other account balances, visit the following articles:

- [Connected account balances](#)
- [Fiat account balances](#)
- [Whitelisted address balances](#)

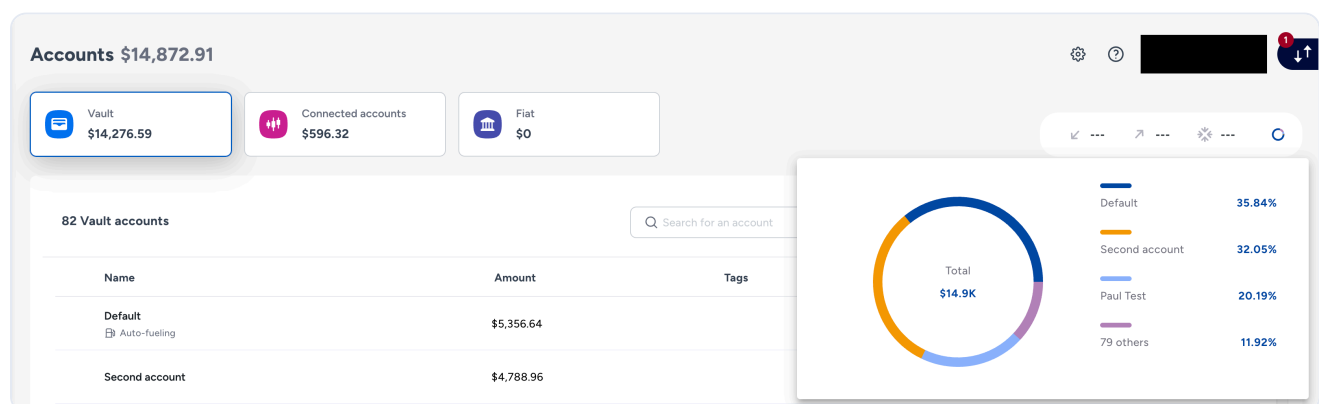

Viewing account balances

There are several ways to view the various balances in your workspace.

Accounts page

The Accounts page displays the total amount of assets held across all Vault accounts, connected accounts, and fiat accounts, along with their [current USD rate](#). At the top of the page is the total across all account types, with the individual account type totals under it.

To view how an account type's total balance is distributed, select  to open the balance chart.

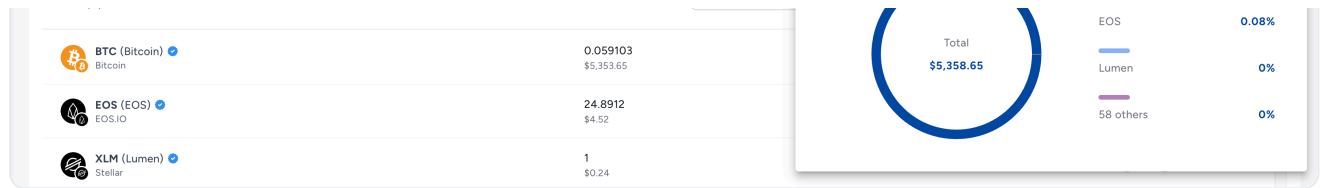

To view how the assets in a specific account are distributed, first select the account to open it, then select  to open the balance chart.

You can also search for a specific account if necessary, and sort the accounts according to their balance (high to low, low to high).

Assets page

The Assets page displays a list of all the assets held in your Vault accounts. This list shows the asset's name, the quantity of the asset, the asset's current USD value (relevant to the amount you hold), and the number of accounts in your workspace that have a wallet for that asset. You can also search for a specific asset if necessary.

Asset	Amount	Accounts
BTC (Bitcoin)	0.11632 \$10,548.72	44
ETH (Test Ether)	0.677593 \$2,124.76	2
tBTC (Test Bitcoin)	0.006366 \$577.31	20
SOL (Devnet Solana)	4 \$532.01	3

Account balance types

Fireblocks provides multiple balance fields to represent different states of assets within Vault accounts. Understanding these balance types is crucial for accurate treasury management and transaction planning.

Total
Available
Pending
Frozen
Locked
Staked
Reserved
Total The total balance of assets in your account as recorded on the blockchain. Use Cases

https://support.fireblocks.io/hc/en-us/articles/6241325955996-Account-balances

3/7

- Represents the confirmed balance as reported by the blockchain. Unconfirmed incoming transactions are excluded from the total.
- Highest-level balance view
- Does not equal the spendable balance when you have transactions in progress
- For UTXO: Total doesn't include mempool outgoing transactions (confirmation 0)

Balance relationship example

Example: [Standard Vault Account](#)

```
{
  "id": "ETH",
  "total": "10.5",
  "balance": "10.5",
  "available": "9.0",
  "pending": "0.5",
  "frozen": "0.5",
  "lockedAmount": "0.5",
  "staked": "0"
}
```

Breakdown:

- Total/Balance: 10.5 ETH owned
- Available: 9.0 ETH can be spent immediately
- Pending: 0.5 ETH in incoming incompletd transactions
- Frozen: 0.5 ETH frozen by AML policy
- LockedAmount: 0.5 ETH locked (e.g., outflight transaction)

Validation:

Total (10.5) = Available (9.0) + Pending (0.5) + Frozen (0.5) + LockedAmount

balances may temporarily be inaccurate. This can include negative available balances, even from a single transaction. These inconsistencies normally resolve automatically once all transactions reach their final confirmed state.

Manual updates

If you believe an asset's balance is not up-to-date, use the [refresh balance API endpoint](#) to refresh it manually:

POST /v1/vault/accounts/{vaultAccountId}/{assetId}/balance

Please note that this endpoint is rate-limited.

Summary table

Balance type	Spendable?	Includes Pending?	Includes Frozen?	Includes Locked?	Includes Staked?	Use for
Total	✗	✓	✓	✓	✓	Overall position
Available	✓	✗	✗	✗	✗	Transaction validation
Pending	✗	N/A	✗	✗	✗	In-flight tracking
Frozen	✗	✗	N/A	✗	✗	Compliance holds
Locked	✗	✗	✗	N/A	✗	Out-flight transactions
Staked	✗	✗	✗	✗	N/A	Staking positions

Common questions

Why is my Available balance lower than the Total?

Your Available balance excludes funds that are:

Legacy pending payments

Can I spend my Pending balance?

No. Pending funds are incoming transactions that haven't reached the required confirmations.

What happens to the Reserved balance if I try to spend it?

The transaction will fail. The reserved balance must remain in the account to keep it active on the blockchain.
