Account types and provider features glossary

Updated 13 days ago

Use this glossary to understand how main accounts, sub-accounts, trading accounts, testnet environments, Off-Exchange, Orders, and internal transfers work across supported providers. This article consolidates all definitions and capabilities referenced in the Provider Network.

Account hierarchy

Main accounts

Main accounts are the default provider accounts and the gateway between the provider and all other locations in your Fireblocks workspace. Operational routing, funding, and withdrawal rules are described in [Connected accounts and balances](#).

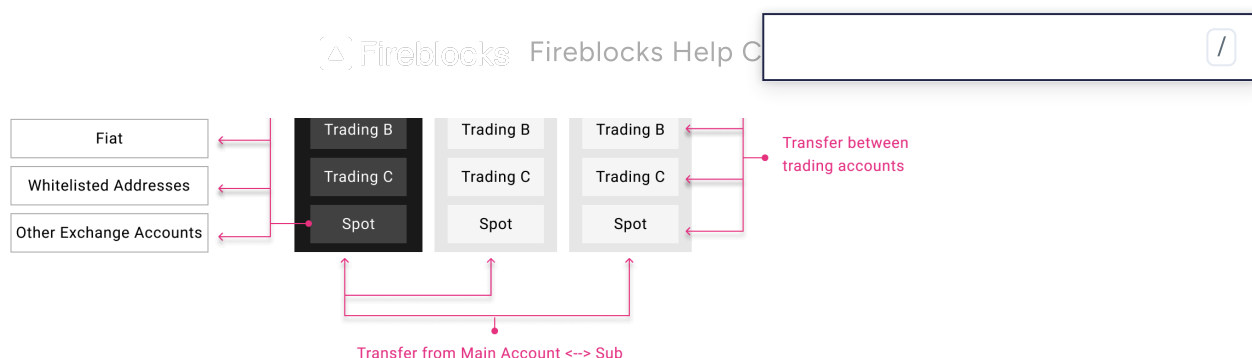

Sub-accounts

[Sub-accounts](#) allow you to separate teams, strategies, or risk. Funding, withdrawal routing, visibility rules, and transfer behavior are described in [Connected accounts and balances](#).

Trading accounts

Fireblocks provides visibility and management for [supported provider trading accounts](#), including spot, derivatives, margin, futures, and options accounts, and enables rebalancing between them on supported exchanges. Funding flows, transfer routes, visibility behavior, and API permission requirements are described in [Connected accounts and balances](#).

General trading account definitions

- **Spot:** Exchange crypto-to-crypto or fiat-to-crypto on a specified spot date for immediate delivery.
- **Derivatives:** Financial products whose value is derived from an underlying asset. Depending on how the product is structured, the product may or may not have the same price as the replicated asset.
- **Margin:** Trading with leverage by borrowing funds from the exchange. The initial margin is the minimum amount of funds you must deposit to open a position and usually comes with the daily cost of interest.
- **Futures:** Agreements to trade at a future date for a preset price and quantity as agreed upon during the signing of the contract. An initial margin deposit is needed to initiate the trade.
- **Options:** Contracts allowing (but not obligating) a buyer to buy or sell an asset at a defined price within the contract's lifetime. Unlike futures, the holder is not required to buy or sell the asset if they choose not to.

Trading account notes

- Some providers require enabling trading in the API settings.
- Inner-exchange transfers appear in the [Audit Log](#).
- Transfers between trading accounts are not restricted by your Policies.

OmiseGO	0.153103 OMG \$0.62	
EOS	0.000026 EOS \$0	
USDT	<0.000001 USDT \$0	
Margin (Cross)		\$17.76
Ethereum	0.01 ETH \$12.4	
Stellar	18 XLM \$5.36	
Coin Futures		--

Provider trading account mapping

The following tables map trading account types to provider API references and available transfer routes.

Binance trading account mapping

Before you begin, make sure trading accounts are [enabled on your Binance accounts and APIs](#).

Trading account	API reference	Description	Available transfers
Spot	FUNDABLE	Buy & sell crypto directly	Withdraw, transfer to other trading accounts
Margin	MARGIN	Trade with leverage	Transfer between trading accounts
COIN- [Ⓜ] Futures	COIN_FUTURES	Coin-settled futures up to x125 leverage	Transfer between trading accounts
USDT- [Ⓜ] Futures	USDT_FUTURES	USDT-settled futures up to x125 leverage	Transfer between trading accounts
Options	OPTIONS	Trade options contracts on supported crypto assets	Transfer between trading accounts

Bitfinex trading account mapping

Before you begin, make sure trading accounts are [enabled on your Bitfinex accounts](#).

Don't see what you're looking for? Log in for the full Help Center experience

 Fireblocks Fireblocks Help Center

Funding	MARGIN	Provide margin funding and financing	Transfer between trading accounts
Margin	FUNDING	Leveraged long and short positions	Transfer between trading accounts

Known Bitfinex limitations

Some transfers may label assets with **BTCFO** or **USDTFO**. These represent Bitfinex internal derivative accounts that Fireblocks *does not support*. Move these assets manually through the Bitfinex platform, from derivative accounts to margin accounts.

HTX trading account mapping

Before you begin, make sure trading accounts are [enabled on your HTX accounts](#).

Trading account	API reference	Description	Available transfers
Spot	FUNDABLE	Buy & sell crypto directly	Withdraw, transfer to other trading accounts
Futures	FUTURES	Trade futures	Transfer between trading accounts
Coin Margined Swap	COIN_MARGINED_SWAP	Perpetual swaps backed by multiple coins	Transfer between trading accounts
USDT Margined Swap	USDT_MARGINED_SWAP_CROSS	Trade various perpetual swaps with only USDT; use USDT as collateral for a specific swap pair (USDT BTC)	Transfer between trading accounts
Option	OPTION	Trade options	Transfer between trading accounts

OKEx trading account mapping

Before you begin, make sure trading accounts are [enabled on your OKEx accounts](#).

			trading accounts
Spot	SPOT	Buy & sell crypto directly	Transfer between trading accounts
Futures (Crossed)	FUTURES_CROSSED	Cross-margin mode for futures positions. In this mode, the margin of all holding positions will be shared, meaning that all assets in your account will be used as your position margin	Transfer between trading accounts

Testnet support

Testnet environments allow trading with testnet assets on supported providers.

- Useful for testing end-to-end trading workflows.
- May not operate with 24/7 uptime like mainnet.
- Supports development without using real funds.

Off-Exchange

Off-Exchange allows you to trade on centralized providers while holding funds securely in your Fireblocks Collateral Vault Account (CVA). Collateral management and settlement workflows are described in [Connected accounts and balances > Off-Exchange](#).

Learn more about [Fireblocks Off Exchange](#).

Orders

Fireblocks Orders provide conversion between fiat and digital assets using integrated on/off-ramp providers.

Its capabilities include:

To learn more about the Fireblocks Orders, please click [here](#).

Internal transfers

Fireblocks supports two types of internal transfers:

1. Trading account transfers (provider-level)

- Transfer funds between trading accounts within the same provider account.
- These transfers are off-chain, instant, and have no network fees. For example, rebalancing between spot and margin accounts, or between futures and spot accounts.

2. Connected account internal transfers (Fireblocks-level)

- Transfer funds between the main account and sub-accounts under the same API key.
- The provider treats this as a withdrawal, but funds remain within your exchange accounts.

Operational transfer routes and restrictions are described in [Connected accounts and balances > Internal transfers and rebalancing](#).
