Adding a NEAR wallet

Updated 1 year ago

Overview

To add a NEAR wallet to your Fireblocks workspace for transferring NEAR assets on the NEAR blockchain, you must first opt in by completing an on-chain transaction on the NEAR blockchain.

Important

- Each NEAR wallet you create requires an on-chain transaction.
- Since creating a NEAR wallet requires an on-chain transaction, only [users who can sign transactions](#) can create NEAR wallets.
- Currently, Fireblocks supports only transferring, trading, storing, and managing NEAR tokens. Since you cannot list NEAR tokens, they are not visible in the Console.
- You can manage and trade NEAR tokens through our WalletConnect integration or using Raw Signing.

Adding a NEAR wallet to a vault account

1. In the Fireblocks Console, go to **Accounts > Vault**.
2. Select the appropriate vault account, then select **+ Asset Wallet**.
3. On the Add Asset Wallet window, select or enter **NEAR**.
4. Select **Add**.
5. Deposit a minimum of **0.00182 NEAR** into the asset wallet you just created.

This deposit creates your new NEAR account on the blockchain. Once the account is approved and activated, you can deposit NEAR assets in any amount. However, if you deposit less than 0.00182 NEAR on your first transaction, your account will not be created.

Use the Recent activity panel to view the current status of your deposit transaction.
