Adding a Solana asset wallet

Updated 4 months ago

Only users who can sign transactions can create SOL wallets

Only users with signing permissions (Owner, Admins, and Signers) can create a Solana asset wallet, since activating it requires an onchain transaction.

Adding a Solana asset wallet

1. Go to **Accounts**  > **Vault**  in your Fireblocks Console, select the appropriate Vault account, and then select **+ Create Wallet**.
2. On the Add Asset Wallet window, select **SOL** from the drop-down list. You can also begin typing the asset's name to search for it.
3. Select **Add**.
4. Deposit a recommended minimum of 0.01 SOL to the asset wallet you just created.

After the SOL asset wallet is approved and the minimum deposit transaction is completed, the SOL asset wallet you just created is added to the Solana blockchain. You can then [create SPL asset wallets](#) in this vault account.

Warning

Due to a behavioral change, creating a token account wallet will no longer be reflected on the blockchain; instead, it will only make the wallet on Fireblocks.

Solana wallet minimum balance
