Adding an Algorand asset wallet

Updated 6 months ago

Important

Users must have signing keys to add a wallet. Only users with signing permissions, such as Owners, Admins, and Signers, can create an Algorand asset wallet. A Non-Signing Admin role cannot add wallets. If users try to add a wallet without signing keys, an error message "Signer not found" will appear in the **Recent activity** or **Transaction history** areas.

Overview

To add an Algorand asset wallet in your Fireblocks workspace for transferring Algorand Standard Assets (ASA) on the Algorand blockchain, you must first complete an on-chain transaction on the Algorand blockchain. Each additional ASA wallet in a vault account also requires a completed on-chain transaction.

Only users with signing permissions, such as Owners, Admins, and Signers, can create an ASA wallet. Editors with a designated Signer can't create ASA asset wallets. [Learn more about user roles.](#)

Adding an Algorand asset wallet to a vault account

To add an ASA wallet, complete the following steps:

If you have already created an ALGO asset wallet to a vault account, you can go to step 6.

1. Go to **Accounts > Vault** in your Fireblocks Console.
2. Select the vault account to which you want to add the ASA wallet.
3. Select **+ Create Wallet**.

- ...specify a minimum of 0.1 Algorand as the deposit amount. This deposit is an on-chain operation that actually generates the account. You will not be able to add other Algorand asset wallets to this vault account until this deposit is complete.
7. The asset wallet you just created is added to the Algorand blockchain.

After the asset wallet is approved and the minimum deposit transaction is completed, you can create additional ASA assets in this vault account.

Adding an ASA token

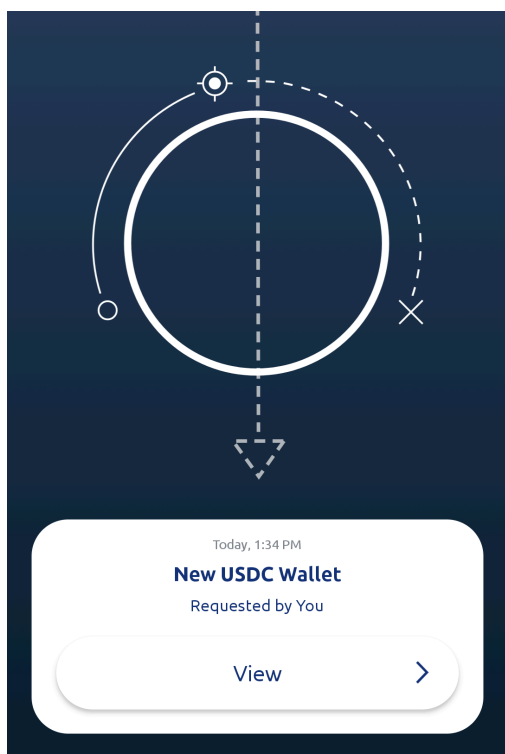

Any ASA token reserves an additional 0.1 Algorand. In order to cover for the OPT IN (enable_asset) operation fees, your balance must be at least 0.21 Algorand.

1. Follow steps 1 to 3 described above.
2. In the **Create Asset Wallet** window, select the ASA token you would like to add from the drop-down list. You can also begin typing the asset's name to search for it. Note that you can add only one wallet of each asset type to a vault account.
3. The new asset wallet is now labeled **Pending Transaction Completion** and requires approval and signing.
4. Open the Fireblocks mobile app and select **View** for the **New Asset Approval** request.

/

5. Select **Approve** ✓ to continue. Expand the **Issuer** field to view the token issuer ID.

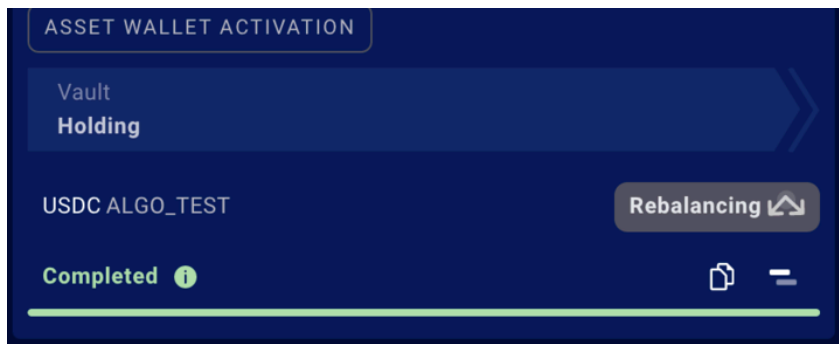

6. Enter your PIN code.
