Bullish account

Updated 8 months ago

Configuring your Bullish account

To configure your Bullish account to connect to Fireblocks:

1. Refer to the [Bullish API Documentation](#) to learn how to generate a Bullish API key.
2. When prompted to do so, name your new API Key “Fireblocks.”
3. After you confirm the validity of your new API key, copy and keep a record of both the API Key and API Secret. Bullish uses the term **UUID** for API Key, and **API Private Key** for API Secret. You will need them when adding this exchange to your workspace.
4. Optionally, whitelist this Fireblocks IP address: 52.76.208.129.

Configuring Fireblocks

1. In the Fireblocks Console, go to **Accounts > Connected accounts**.
2. Select **+ Connect account**.
3. Select **Bullish**, select **Main Account**, and then complete the following fields:
 - a. **Display name:** Enter the name you want to give this exchange account on Fireblocks.
 - b. **API Key:** Enter the UUID that you saved from Bullish.
 - c. **API Secret:** Enter the API Private Key that you saved from Bullish.
4. Select **Connect Account**.

The [Admin Quorum](#) must approve the new account to make it available for new transfers from your workspace.

Your Bullish account appears on the Exchanges page along with all managed assets and their balances. Following Admin Quorum approval, transfers are available from your vault accounts, whitelisted addresses, Fireblocks P2P Network connections, and other connected exchange accounts to and from your Bullish account.
