Bullish sub-account

Updated 8 months ago

Configuring your Bullish sub-account

To configure your Bullish trading or sub-account to connect to Fireblocks:

1. Refer to the [Bullish API Documentation](#) to learn how to configure an API key for a Bullish trading account.
2. Enter an **API Key name** that begins with Fireblocks.
3. Copy and keep a record of both the API Key and API Secret. Bullish uses the term **UUID** for API Key, and **API Private Key** for API Secret. You will need them when adding this exchange to your workspace.
4. Whitelist the following IP address: **52.76.208.129**

Configuring Fireblocks

1. In the Fireblocks Console, go to **Accounts > Connected accounts**.
2. Select **+ Connect account**.
3. Select **Bullish**, select **Sub Account**, and then complete the following fields:
 - a. **Display name:** Enter the name you want to give this exchange account on Fireblocks.
 - b. **API Key:** Enter the UUID that you saved from Bullish.
 - c. **API Secret:** Enter the API Private Key that you saved from Bullish. (This includes “-----BEGIN PRIVATE KEY-----” and “-----END PRIVATE KEY-----”)
 - d. **Trading Account ID:** This is a 15-digit numeric ID beginning with ‘111’ that identifies your Bullish sub-account.
4. Select **Connect Account**.

The [Admin Quorum](#) must approve the new account to make it available for new transfers from your workspace.
