Claiming & Redeeming NIGHT tokens from the Midnight Glacier Drop

Updated 1 month ago

Overview

The Midnight Glacier Drop is a large-scale token distribution by the Midnight network, allocating NIGHT governance tokens to eligible addresses across eight major blockchains based on a snapshot of eight blockchains:

- Cardano (ADA)
- Bitcoin (BTC)
- Ethereum / EVM (ETH, BNB & BAT)
- Solana (SOL)
- Avalanche (AVAX)
- Ripple (XRP)

Claimants must prove control over their eligible addresses and provide an unused Cardano address to receive their tokens. Initially, all claimed tokens are “frozen” and become available gradually over a one-year thawing (unlocking) schedule, ensuring a more equitable and secure distribution process. After claiming, users can also redeem thawed NIGHT tokens according to Midnight's unlock schedule.

Fireblocks enables eligible users to securely claim, redeem, monitor, and manage Midnight's NIGHT tokens via the external SDK or desktop application, allowing users to connect their Fireblocks accounts and participate in NIGHT token claims with full auditability, compliance, and industry-leading MPC security.

Before you begin

To use either the SDK or the desktop app solution, you must have Raw Signing enabled in your Fireblocks workspace. Please contact your Customer Success Manager for more information.

infrastructure and security features. Both options ensure that only authorized workspace users can access, claim, redeem, and manage NIGHT allocations.

Option 1: SDK with REST API

Ideal for technical teams and integrators, and providing direct programmatic access to all NIGHT endpoints, the NIGHT SDK enables developers to:

- Fetch vault addresses from Fireblocks
- Check addresses for eligibility for claiming NIGHT tokens
- Submit a claim transaction using Typed Messaging or Raw Signing
- Redeem NIGHT tokens
- Transfer NIGHT tokens between addresses
- Retrieve claims history for an address

Option 2: Desktop UI application

Recommended for non-technical users, this Electron-based local application provides an intuitive interface to:

- View vault accounts and balances
- Claim NIGHT tokens for eligible wallets
- Redeem NIGHT tokens
- Transfer NIGHT tokens
- Monitor transaction history

Currently available on macOS and Linux.

Installation & Setup

1. Enable Raw Signing
2. Configure the Policy
3. SDK setup
4. Using the desktop app
