Configuring Solana Gasless transactions

Updated 3 months ago

Overview

Solana Gasless allows a vault address to send SPL Solana native tokens, whereas a different vault would pay for the transaction fee in SOL. This allows the sender vault to perform transactions without holding any SOL. Instead, another vault can sponsor the transaction's required gas fee. This is valid across all Solana-based tokens, not including the SOL base token.

Solana Gasless leverages the Solana Fee Payer capabilities. A Fee Payer-sponsored transaction is signed by two vault accounts: the local relay and the token owner. A transaction can be sent only from vault accounts sharing a key set with the local relay vault account.

Important

Solana Gasless is not integrated with Embedded Wallets. Once integrated, we will publish an announcement.

Configuring Solana Gasless transactions

To configure Solana Gasless fueling:

1. Navigate to **Settings**  > **General** > **Gasless transactions**.
2. Toggle on **Solana**.
