Configuring Universal Gasless transactions

Updated 1 month ago

Overview

Universal Gasless allows you to send transactions on Ethereum without needing to hold ETH or pay gas fees yourself. Instead, another party (like a business or app) can sponsor your transaction's gas fees.

To help provide a seamless and frictionless experience, Universal Gasless works across all Ethereum-based tokens. Additionally, it supports Transfer, Contract Call, Mint, and Burn actions.

Looking for EVM chain compatibility?

Learn more about Universal Gasless support on EVM chains [here](#).

How to configure Universal Gasless

1. In the Fireblocks Console, go to **Settings**  > **General** > **Gasless transactions**.
2. Toggle on **EVM**.
3. On the EVM window, select the **Universal gasless** option if it is visible. Otherwise, continue with the following steps.

With Universal gasless option

4. Select the type of relay you want to use. Learn more about each relay here.

Gasless support will be available for all assets on [compatible EVM blockchains](#). Vault accounts will be upgraded to smart contracts via EIP-7702, requiring one additional action on the first transaction after activation. [Learn more](#)

☒ I understand that workspace vault accounts will upgrade to EIP-7702 smart contracts.

5. Select how you want the gasless service to be used:

- On by default:** Gasless transactions are enabled when available, but may be disabled per transaction.
- Off by default:** Gasless transactions are disabled, but may be enabled per transaction.
- Off:** Gasless transactions are disabled.

6. When you're finished, select **Save**.

7. Use the left-hand navigation to go to **Policies**.

these transactions.

Scope

Specify the extent of coverage for the rule.

Rule name

Upgrade accounts for EVM gasless transactions

Source

Any vault account x

Action

Specify what happens when a transaction matches all criteria.

Block

Allow

11. For the Action, select **Allow**.
12. In your relay workspace's Contract call policy, create a rule and select **Gasless-Orchestrator** as the initiator. This contract was added automatically when you enabled Universal Gasless.

Contract call policy

Published by Amir Hagafny on Jan 13, 2026 at 18:27.

#	Name	Initiator	Source	Destination	Method	Asset	Amount	Action
01	Edit to rename	Anyone	Any	Any	Any	Any	\$Unlimited per transaction	Allow
02	Edit to rename	Gasless-Orchestrator	Vault - Relay Gas Tank	Any vault account	Any	Any	\$Unlimited per transaction	Allow

Additional notes

- The explicit Gasless-Orchestrator rule is required for the Gasless Orchestrator to perform contract call transactions, even if you have a Contract call policy rule that uses anyone as the initiator.
