Custom Development Services

Updated 1 year ago

Overview

The Custom Development Team, part of [Fireblocks' Professional Services](#) organization, delivers bespoke engineering solutions to support customers with advanced or non-standard technical requirements. The team's core mission is to extend the capabilities of the Fireblocks platform by developing custom-built components that address unique business needs.

These tailored solutions are always built on top of Fireblocks' existing infrastructure and adhere to the same architectural and operational standards that underpin the platform itself. This ensures full compatibility, high performance, and a consistent user experience across all custom and native functionalities.

Custom Development engagements are typically initiated when a customer requires functionality not yet available in the core product, or when deep integration into proprietary systems, enterprise workflows, or specialized environments is essential. Deliverables may include internal tools, integration services, or automated processes that leverage Fireblocks APIs, SDKs, and secure workflows.

Every engagement is architected with a strong commitment to Fireblocks' security model and infrastructure principles. Solutions are developed using secure interfaces and undergo rigorous internal review to ensure alignment with the platform's operational, architectural, and compliance standards. By combining deep domain expertise with platform-native design practices, the Custom Development Team enables customers to realize highly specific outcomes while preserving the security, scalability, and reliability that define the Fireblocks platform.

Custom Development represents a critical layer of Fireblocks' delivery strategy, empowering organizations to innovate with confidence, even in highly complex or regulated environments.

[Services](#), which is dedicated to accelerating time-to-value, improving operational efficiency, and helping customers bring new digital asset solutions to market.

Through structured implementation packages and expert-led guidance, Fireblocks Professional Services supports customers at every stage of their journey, from initial deployment and configuration to advanced use case enablement. The team has worked with hundreds of clients globally, providing the tools, insights, and technical depth required to deploy securely, scale effectively, and meet evolving business goals.

Accessing Custom Development Solutions

The solutions described in this Help Center section are developed and maintained by Fireblocks' Custom Development Team and are not part of the standard product feature set. As such, they are not enabled by default and may require additional configuration, enablement steps, or deployment support depending on your use case and environment.

If you are interested in leveraging one of these solutions or if you believe your business requires a similar custom integration, please [reach out to your Customer Success Manager \(CSM\)](#). Your CSM will coordinate the internal evaluation and facilitate engagement with the Professional Services team to assess feasibility, scope, and implementation options.
