Gas Station Autoboot

Updated 3 days ago

Newer workspaces use Gas Station 2.0

If your workspace was created in January 2024 or later, refer to the [Gas Station 2.0 setup documentation](#).

Autoboot is a feature of the Fireblocks Gas Station that assists in refueling your Gas Station vault account with the base asset(s) necessary for fueling all other vault accounts with auto-fueling enabled.

A pending transaction is boosted when Fireblocks determines the following conditions are met:

- The autoboot feature is on.
- An asset wallet in your Gas Station vault account needs refueling.
- There's a pending top-up transaction to an asset wallet in your Gas Station vault account with the status CONFIRMING for more than 30 minutes.
- The transaction hasn't been boosted before.

This creates a new replace-by-fee (RBF) transaction, which drops the stuck transaction from the mempool and replaces it with a new transaction with increased fees and priority.

This feature supports all EVM blockchains.

Enabling autoboot

To enable autoboot in your workspace:

1. In the Fireblocks Console, go to **Settings > General** and scroll to the **Gas Station vault account** section.
2. Enable **Automatically boost stuck transactions**.

Enabling autoboot affects currently pending transactions that meet the conditions described above.
