network. It also supports importing private keys. [Download here](#).

1. Open MetaMask.
2. Select OG from the network menu or, if OG is not available in your MetaMask application, select **Add Network** and follow these steps:
 - a. Enter **OG** for **Network Name**.
 - b. Enter `http://34.58.152.235:8080` for the **New RPC URL**.
 - c. Enter **16661** for **Chain ID**.
 - d. Enter **OG** for **Currency Symbol**.
 - e. Enter <http://chainscan.Og.ai> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to OG.
3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

Abstract (ETH)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download here](#).

1. Open MetaMask.
2. Select Abstract from the network menu or, if Abstract is not available in your MetaMask application, select **Add Network** and follow these steps:
 - a. Enter **Abstract** for **Network Name**.
 - b. Enter <https://api.mainnet.abs.xyz> for the **New RPC URL**.
 - c. Enter **2741** for **Chain ID**.
 - d. Enter **ETH** for **Currency Symbol**.
 - e. Enter <https://abscan.org/> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Abstract.
3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

/

1. Open MetaMask.
2. Select Aevo from the network menu or, if Aevo is not available in your MetaMask application, select Add Network and follow these steps:
 - Enter Aevo for Network Name.
 - Enter <https://rpc-aevo-mainnet-prod-0.t.conduit.xyz> for the New RPC URL.
 - Enter 2999 for Chain ID.
 - Enter ETH for Currency Symbol.
 - Enter <https://explorer.aevo.xyz/> for Blockchain Explorer URL.
 - Select Save.
 - Make sure your currently selected network is now set to Aevo.
3. Select Import Account from the avatar menu.
4. Select Private Key as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select Import. Your wallet is now imported successfully into MetaMask.

Aleph Zero (AZERO)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download here](#).

1. Open MetaMask.
2. Select Aleph Zero from the network menu or, if Aleph Zero is not available in your MetaMask application, select **Add Network** and follow these steps:
 - a. Enter **Aleph Zero** for **Network Name**.
 - b. Enter <https://alephzero.drpc.org> for the **New RPC URL**.
 - c. Enter **41455** for **Chain ID**.
 - d. Enter **AZERO** for **Currency Symbol**.
 - e. Enter <https://evm-explorer.alephzero.org/> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Aleph Zero.
3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

How to import private keys to external wallets supporting private key import

1. Open MetaMask.
2. Select Astar from the network menu or, if Astar is not available in your MetaMask application, select **Add Network** and follow these steps:
 - a. Enter **Astar** for **Network Name**.
 - b. Enter <https://evm.astar.network> for the **New RPC URL**.
 - c. Enter **592** for **Chain ID**.
 - d. Enter **ASTR** for **Currency Symbol**.
 - e. Enter <https://blockscout.com/astar> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Astar.
3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

ATOM (Cosmos Hub)

Import your wallet to the recommended application: Cosmostation

Cosmostation is a multi-chain cryptocurrency wallet that supports cosmos interchain, Ethereum, ETH Layer 2, and EVM ecosystems. It allows you to import wallets using private keys. [Cosmostation Download Page](#).

1. Open your Cosmostation wallet using the mobile, desktop, or Chrome browser version.
2. Select **Import Wallet**, and then select the **Restore with Private Key** option.
3. Give an account name and enter your private key. Note that the private digit string must have 66 characters, therefore you must add "0x" at the beginning of it.
4. Select **Cosmos** as the chain for the imported wallet.
5. Create a password. Your wallet is now successfully imported to Cosmostation.

Aurora

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download MetaMask](#).

1. Open MetaMask.

Don't see what you're looking for? Log in for the full Help Center experience

/

- c. Enter **1313161334** for **Chain ID**.
- d. Enter **ETH** for **Currency Symbol**.
- e. Enter <https://aurorascan.dev> for **Blockchain Explorer URL**.
- f. Select **Save**.
- g. Make sure your currently selected network is now set to Aurora.

3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

Avalanche (AVAX)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download MetaMask](#).

1. Open MetaMask.
2. Select **Avalanche** from the **Network** menu. If the Avalanche network is not available in your Metamask application, select **Add Network** and follow these steps:
 - a. Enter **Avalanche Mainnet** for **Network Name**.
 - b. Enter <https://api.avax.network/ext/bc/C/rpc> for the **New RPC URL**.
 - c. Enter **43114** for **Chain ID**.
 - d. Enter **AVAX** for **Currency Symbol**.
 - e. Enter <https://snowtrace.io/> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Avalanche Mainnet.

3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

Axelar

Import your wallet to the recommended application: Cosmopolitan

Cosmopolitan is a multi-chain cryptocurrency wallet that supports Cosmopolitan interchain, Ethereum, ETH Layer 2, and EVM ecosystems. It allows you to import wallets

/

3. Give an account name and enter your private key. Note that the private digit string must have 66 characters, therefore you must add "0x" at the beginning of it.
4. Select Axelar as the chain for the imported wallet.
5. Create a password. Your wallet is now successfully imported to Cosmopolitan.

Babylon (BABY)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download here](#).

1. Open MetaMask.
2. Select Babylon from the network menu or, if Babylon is not available in your MetaMask application, select **Add Network** and follow these steps:
 - a. Enter **Babylon** for **Network Name**.
 - b. Enter <https://rpc.apechain.com/http> for the **New RPC URL**.
 - c. Enter **bbn-1** for **Chain ID**.
 - d. Enter **BABY** for **Currency Symbol**.
 - e. Enter <https://babylon.explorers.guru> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Babylon.
3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

Berachain

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download here](#).

1. Open MetaMask.
2. Select Berachain from the network menu or, if Berachain is not available in your MetaMask application, select **Add Network** and follow these steps:
 - Enter **Berachain** for **Network Name**.
 - Enter <https://www.google.com/url?q=http://k8s-guardedt-archive0-706b2d9d3e-0a11fbacff1901c5.elb.us-west->

1f6003a02eec3390.elb.us-west-2.amazonaws.com for Blockchain Explorer URL.

- Select **Save**.
 - Make sure your currently selected network is now set to Berachain.
3. Select **Import Account** from the avatar menu.
 4. Select **Private Key** as the type.
 5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
 6. Select **Import**. Your wallet is now imported successfully into MetaMask.

Bitcoin (BTC)

Import your wallet to the recommended application: Electrum

Electrum is a cross-platform application for managing BTC wallets. It supports importing extended private keys with base58 and bech38 formats for legacy addresses and SegWit addresses, respectively. [Download Electrum](#).

1. Open the Electrum application.
2. Create a new wallet.
3. Enter a relevant wallet name and select **Next**.
4. Select **Standard wallet** as the wallet type, and then select **Next**.
5. Select **Use a master key**, and then select **Next**.
6. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool. and then select **Next**.
7. Choose a password to encrypt your Electrum wallets and confirm your choice. We recommend using a strong password. Your wallet is now imported successfully into Electrum.

Bitcoin Cash (BCH)

Import your wallet to the recommended application: Electron Cash

Electron Cash is based on Bitcoin Electrum and is available for free for Windows, OSX, and Linux desktops, as well as for Android and iOS mobile operating systems.

1. Open the Electron Cash application.
2. Create a new wallet.
3. Enter an appropriate name, and then select **Next**.
4. Select **Import Bitcoin Cash addresses or private keys** for the wallet type, and then select **Next**.

Blast (ETH)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download here](#).

1. Open MetaMask.
2. Select Blast from the network menu or, if Blast is not available in your MetaMask application, select **Add Network** and follow these steps:
 - a. Enter **Blast** for **Network Name**.
 - b. Enter <https://rpc.blast.io> for the **New RPC URL**.
 - c. Enter **81457** for **Chain ID**.
 - d. Enter **ETH** for **Currency Symbol**.
 - e. Enter <https://blastscan.io> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Blast.
3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

BNB (formerly Binance) Smart Chain (BNB/BEP20)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download MetaMask](#).

1. Open MetaMask
2. Select **Smart Chain** from the **Network** menu. If Smart Chain is not available in your Metamask application, select **Add Network** and enter the following details:
 - a. Enter **Smart Chain** for **Network Name**.
 - b. Enter <https://bsc-dataseed.bnbchain.org> for the **New RPC URL**.
 - c. Enter **56** for **Chain ID**.
 - d. Enter **BNB** for **Currency Symbol**.
 - e. Enter <https://bscscan.com> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Smart Chain.

Camino (CAM)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download MetaMask](#).

1. Open MetaMask.
2. Select Camino from the network menu or, if Camino is not available in your MetaMask application, select Add Network and follow these steps:
 - Enter Camino for Network Name.
 - Enter <https://api.camino.network/ext/bc/C/rpc> for the New RPC URL.
 - Enter 500 for Chain ID.
 - Enter CAM for Currency Symbol.
 - Enter <https://suite.camino.network/explorer/camino/c-chain> for Blockchain Explorer URL.
 - Select Save.
 - Make sure your currently selected network is now set to Camino.
3. Select Import Account from the avatar menu.
4. Select Private Key as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select Import. Your wallet is now imported successfully into MetaMask.

Canton

External wallet import is not supported.

Canton is a permissioned, non-EVM network. Fireblocks does not support exporting/importing Canton private keys to third-party wallets. Use Fireblocks-managed nodes or customer-provided nodes (BYOV) to access Canton assets. For enterprise connectivity, contact your Customer Success Manager.

Canto

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download here](#).

1. Open MetaMask.
2. Select Canto from the network menu or, if Canto is not available in your MetaMask application, select **Add Network** and follow these steps:

Don't see what you're looking for? Log in for the full Help Center experience

Fireblocks Help Center

f. Select **Save**.

g. Make sure your currently selected network is now set to Canto.

3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**.

Your wallet is now imported successfully into MetaMask.

Celestia

Import your wallet to the recommended application: Cosmostation

Cosmostation is a multi-chain cryptocurrency wallet that supports cosmos interchain, Ethereum, ETH Layer 2, and EVM ecosystems, such as Celestia. It allows you to import wallets using private keys. [Cosmostation Download Page](#).

1. Open your Cosmostation wallet using the mobile, desktop, or Chrome browser version.
2. Select **Import Wallet**, and then select the **Restore with Private Key** option.
3. Give an account name and enter your private key. Note that the private digit string must have 66 characters, therefore you must add "0x" at the beginning of it.
4. Select **Cosmos** as the chain for the imported wallet.
5. Create a password. Your wallet is now successfully imported to Cosmostation.

Celo (CELO)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download MetaMask](#).

1. Open MetaMask.
2. Select **Celo** from the **Network** menu. If Celo is not available in your Metamask application, select **Add Network** and follow these steps:
 - a. Enter **Celo Mainnet** for **Network Name**.
 - b. Enter <https://forno.celo.org> for the **New RPC URL**.
 - c. Enter **42220** for **Chain ID**.
 - d. Enter **CELO** for **Currency Symbol**.
 - e. Enter <https://explorer.celo.org> for **Blockchain Explorer URL**.

Import your wallet to the recommended application: Guarda Wallet

Guarda Wallet is a cross-platform application wallet that supports multiple blockchains. It uses a web-based interface, a browser extension, a desktop, and a mobile app. It allows users to import private keys. [Download Guarda Wallet](#).

1. Open Guarda Wallet on any of the versions available.
2. Click on Restore or Import wallet and select the "Import By Currency" option.
3. Select Doge as the asset, paste your ECDSA extended private key (xprv), and click "Add Wallet"
4. Tap on the "Import" button and you will be prompted to choose a **password**. Your wallet is now successfully imported to Guarda Wallet.

dYdX

Import your wallet to the recommended application: Cosmopolitan

Cosmopolitan is a multi-chain cryptocurrency wallet that supports Cosmopolitan interchain, Ethereum, ETH Layer 2, and EVM ecosystems. It allows you to import wallets using private keys. [Cosmopolitan Download Page](#).

1. Open your Cosmopolitan wallet using the mobile, desktop, or Chrome browser version.
2. Select Import Wallet, and then select the Restore with Private Key option.
3. Give an account name and enter your private key. Note that the private digit string must have 66 characters, therefore you must add "0x" at the beginning of it.
4. Select dYdX as the chain for the imported wallet.
5. Create a password. Your wallet is now successfully imported to Cosmopolitan.

EOS (EOSIO)

Import your wallet to the recommended application: SimpleEOS (by EOSRIO)

SimpleEOS is a wallet designed by EOS Rio for the EOS ecosystem that includes all features available in the EOS.IO software. It is a desktop application compatible with the most popular operating systems (Windows, Linux, and macOS). [Download SimpleEOS](#). Additionally, the source code for SimpleEOS is available on [GitHub](#).

1. Open the SimpleEOS application.
2. Select **Import Existing Key**.
3. Paste your **Derived Private Key** retrieved from the Fireblocks Vault Key Derivation Tool, and then select **Next**.
4. Confirm that the SimpleEOS found the correct account name, and then select **Next**.

Ethereum (ETH/ERC-20)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing ETH, ETH-based tokens including ERC-20 and ERC-721. It also has the ability to add custom ERC-20 and supports the import of private keys. [Download MetaMask](#).

1. Open MetaMask.
2. Select **Import Account** from the avatar menu.
3. Select **Private Key** as the type.
4. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
5. Select **Import**. Your wallet is now imported successfully into MetaMask.

Ethereum Classic (ETC)

Import your wallet to the recommended application: MetaMask

MetaMask is a cross-platform application for managing any Ethereum-compatible blockchain network. It also supports importing private keys. [Download MetaMask](#).

1. Open MetaMask.
2. Select **Ethereum Classic** from the **Network** menu. If Ethereum Classic is not available in your Metamask application, select **Add Network** and follow these steps:
 - a. Enter **Ethereum Classic** for **Network Name**.
 - b. Enter <https://www.ethercluster.com/etc> for the **New RPC URL**.
 - c. Enter **61** for **Chain ID**.
 - d. Enter **ETC** for **Currency Symbol**.
 - e. Enter <https://blockscout.com/etc/mainnet/> for **Blockchain Explorer URL**.
 - f. Select **Save**.
 - g. Make sure your currently selected network is now set to Ethereum Classic.
3. Select **Import Account** from the avatar menu.
4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

4. Select **Private Key** as the type.
5. Enter your Derived Addresses Private Key retrieved using the Fireblocks Vault Key Derivation Tool.
6. Select **Import**. Your wallet is now imported successfully into MetaMask.

Thorchain

Import your wallet to the recommended application: Cosmopolitan

Cosmopolitan is a multi-chain cryptocurrency wallet that supports Cosmopolitan interchain, Ethereum, ETH Layer 2, and EVM ecosystems. It allows you to import wallets using private keys. [Cosmopolitan Download Page](#).

1. Open your Cosmopolitan wallet using the mobile, desktop, or Chrome browser version.
2. Select Import Wallet, and then select the Restore with Private Key option.
3. Give an account name and enter your private key. Note that the private digit string must have 66 characters, therefore you must add “0x” at the beginning of it.
4. Select Thorchain as the chain for the imported wallet.
5. Create a password. Your wallet is now successfully imported to Cosmopolitan.

Tron (TRX)

Import your wallet to the recommended application: Trust Wallet

Trust Wallet is a cross-platform application that supports several blockchains, including TRX – Tron Network. It allows you to import your wallet using a private key. [Download Trust Wallet](#).

1. Open the Trust Wallet mobile application.
2. Click on the settings button and select “Wallets”.
3. Tap on the “+” icon in the top right corner.
4. Select “I already have a wallet”.
5. Select TRX as the Asset you want to import using the generated private key.
6. Enter your ECDSA extended private key (xprv).
7. Click Import to continue.
8. Your wallet is now successfully imported to Trust Wallet.

Unichain (ETH)
