Listing your service on the provider network

Updated 13 days ago

Overview

Fireblocks Network Link enables service providers to integrate with the Fireblocks Provider Network and offer their services to you, through a unified, secure interface.

By integrating with Network Link, providers can make their services available to institutional customers already operating within the Fireblocks ecosystem, including money transmitters, market makers, trading desks, hedge funds, brokerages, custodians, and banks.

Providers use Network Link to expose supported services and capabilities directly within Fireblocks workspaces.

Supported provider capabilities

Through Network Link, providers can offer a range of services, including:

- **Exchanges:** Prefunded trading and Off-Exchange trading support
- **On and off-ramps:** Conversion between fiat currencies and stablecoins, including first- and third-party payment flows
- **Digital asset swaps:** Swapping stablecoins and cryptocurrencies using CeFi or DeFi mechanisms
- **Tokenization:** Issuance and management of stablecoins and tokenized assets

These capabilities allow you, whether as Fireblocks customers or providers, to connect efficiently to liquidity, infrastructure, and business opportunities.

onboarding and integration. See also our [Fireblocks Network Link for providers](#) article.

Registration includes:

- Contacting Fireblocks customer support
- Implementing the Fireblocks Connectivity API
- Completing commercial and technical onboarding requirements

Once approved, your services as a provider become available across Fireblocks workspaces according to the supported capabilities.

Commercial prerequisites

Before starting the integration process, you must complete the following steps:

1. **Sign your provider Memorandum of Understanding (MoU):** Establish the cooperation framework for the integration.
2. **Complete your provider onboarding questionnaire:** Share business requirements and use cases.
3. **Formalize access to technical resources and APIs**
4. **Execute the API Agreement:** Required before public release of the integration.
5. **Sign the Marketing Collaboration Agreement:** Finalize marketing commitments and directory information prior to launch.

Technical integration

For technical requirements and implementation details, refer to the [Network Link integration guide](#).
