Managing your automation rules

Updated 1 year ago

Note

Automation is a premium feature that requires an additional purchase. If you don't have access to this feature, contact your [Customer Success Manager](#) to discuss having it enabled in your Fireblocks workspace.

Overview

The automation rules you create appear on the Automation page, where you can manage them and review your activity. In the **Activity** panel, you can review the history of all instances where an automation rule was triggered. You can also view their statuses.

The screenshot displays the Fireblocks Automation management interface. On the left is a sidebar with navigation links: Get started, Accounts, Assets, NFTs, Staking, Swap, Tokenization, Payments, Automation (highlighted), Fireblocks Network, Web3 access, Addresses, and Transaction history. The main content area is titled 'Automation' and includes a top summary section with 'Daily use 14 per day' (represented by a bar chart) and 'Frequency 98 per week' (represented by a donut chart). Below this is a table of 'Automations (4)' with columns for 'Date created', 'Automation', and 'Status'. The table lists four rules: 'Today, 8:00 pm' (Transfer full amount rule), '8/4/24, 12:00' (On BTC deposit > 0.12345, transfer 0.1 BTC to Exchange Account 1), '1/30/24, 3:00' (Inactive rule that changes are now waiting approval), and '1/30/24, 3:00' (This and that). A 'More Actions' menu is open for the first rule, showing options: Edit, Duplicate, Deactivate, Run now, Show run history, and Delete. On the right side of the interface is a 'Recently run' panel showing a list of executed automation instances with their timestamps and status indicators (green for success, red for failure).

More actions

In the Console, you can view all automations, their current status, and the actions you can take. Select **More Actions** (...) to see all available actions for an automation rule.

/

Select **duplicate** to create a new automation with identical rules that you can then modify and save without affecting the original automation.

Activate or deactivate

Select **deactivate** or **activate** to toggle an automation's status as needed.

Run now

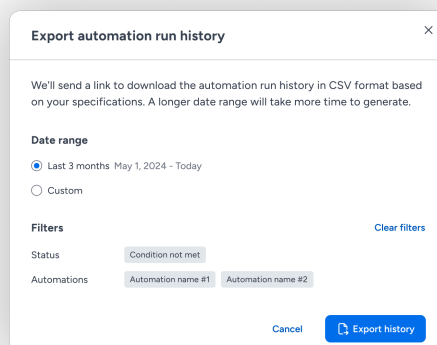

Select **run now** to trigger an automation rule immediately without waiting for any conditions to be met.

Show run history

Select **show run history** to see when the rule was recently run. Select a failed attempt to view more details and the reason for failure.

Export automation run history

When viewing the Run History, select **Export** to download a CSV file with your automation run history. You can select custom filters to only export specific sets of rules.

The dialog box titled "Export automation run history" contains the following elements:

- A close button (X) in the top right corner.
- Text: "We'll send a link to download the automation run history in CSV format based on your specifications. A longer date range will take more time to generate."
- Date range** section:
 - ☒ Last 3 months May 1, 2024 - Today
 - ☐ Custom
- Filters** section:
 - Status: Condition not met
 - Automations: Automation name #1, Automation name #2
 - Clear filters link
- Buttons: Cancel, Export History

The Audit Log also tracks when you create, delete, enable, disable, or edit an Automation rule.
