One-Time Address Transactions

Updated 8 months ago

Warning

This feature poses security risks. We recommend configuring a strict Policy before enabling it. You can set policy rules to allow transfers to one-time addresses for only specific users or user groups, require approval for transfers above a certain threshold, and more. Learn more about [the different rules that you can define using Policies](#).

Overview

The One-Time Address feature allows you to transfer assets to non-whitelisted addresses in your Fireblocks Workspace.

This feature is disabled by default. The workspace Owner must [enable this feature](#).

Add a note

Transfer

1. On the New Transfer window, select **One-time address** for the **To** field.
2. Paste the address to which you want to transfer funds in the **One-time address** field.
3. Complete the rest of your transfer details.
4. Select **Transfer**.

Notes

- The **External wallet** field is optional. You can use it to associate a specific one-time address with a whitelisted external wallet in your workspace. If you choose

Managing incoming and outgoing transactions on the Fireblocks
Network.

Creating an OTA transfer using the API

Call the [Create a new transaction](#) endpoint as follows:

- Enter the destination address in the **oneTimeAddress** sub-field under the [destination field](#). You may optionally include a tag for blockchains that support it.
- The destination type should be either ONE_TIME_ADDRESS or EXTERNAL_WALLET. Selecting an external wallet allows you to associate the transaction with an existing external wallet for auditing purposes.

One-Time Address Reverse Lookup

In some transactions, the destination is set to a one-time address, while your Fireblocks workspace contains an identical whitelisted address. When this occurs the One-Time Address Reverse Lookup feature automatically tries to match that transaction with a rule in your workspace's Policies. These transactions will appear as whitelisted addresses in your Transaction History.

The Reverse Lookup feature is enabled by default for all workspaces created after March 4th, 2021. Older workspaces that have not requested this feature can do so by submitting a [support ticket](#).
