Fireblocks API

Rate limits

Fireblocks aims to provide a stable and secure platform at all times. Accordingly, network traffic is continuously monitored to identify patterns that may affect the network negatively.

We only use rate limits when traffic appears abnormal. If traffic from a single account is too high, we may temporarily throttle or restrict the account. Error responses with status code 429 indicate that you have temporarily exceeded your rate limits.

If your organization's normal operations repeatedly result in rate limiting, we recommend you contact the Fireblocks Support team at support@fireblocks.com.
