Receiving fiat transfers

Updated 8 months ago

Fiat funds can be received from counterparties seamlessly with Fireblocks, similar to receiving any other digital asset.

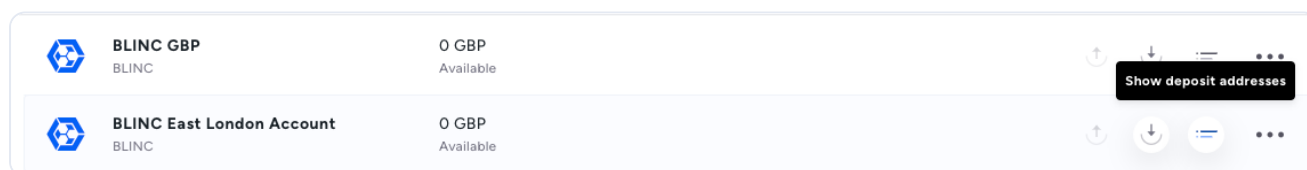

Receiving fiat transactions from a counterparty

Network connections

You can easily receive funds through the Fireblocks P2P Network if your counterparty has a fiat account with the same bank and currency connected to their Fireblocks workspace. This is the recommended way to transfer fiat assets between Fireblocks workspaces.

Sharing your deposit details

You can share your deposit account details with counterparties that do not use Fireblocks to receive fiat transactions. Retrieve your deposit details by clicking the **Show Deposit Address** button on the relevant account card.

Automatic sender identification

Once you whitelist a counterparty's address in an external wallet, any transfers from this address will automatically identify the external wallet as the source of the funds in both the [Recent Activity panel](#) and the [Transaction History](#).

Receiving fiat via the API
