Retry a transaction

Updated 3 months ago

Retrying a transaction creates a new transaction based on the details of a transaction that was unable to complete. You can retry transfer, mint, or burn transactions with Canceled, Blocked by policy, Failed, or Rejected statuses.

The new transaction preserves the **Asset**, **From**, **To**, and **Net amount** fields from the original transaction. However, Fireblocks resets the **Net/Gross** flag and **Tentative fee** fields to their default values (Net and Medium fee).

The new transaction requires approval and signing.

RBF transactions not supported

Replace-by-Fee (RBF) retries are not supported by this function. For more information about RBF, see [Boost or drop a stuck EVM-based transaction](#).
