TON fees

Updated 1 year ago

Per recommendation by the TON foundation, using the fixed fee mode results in more accurate and efficient fees, as the fees are calculated and taken by the blockchain while processing the transaction, during the validation and mining process.

As part of the transaction's creation, we present the estimated fee, which is currently 0.02 for native TON transactions and 0.1 for jettons transactions. Your final paid fees can be found on the transaction history page.
