# TRES integration

Updated 3 months ago

## Overview

**TRES** is a crypto accounting and reporting company that aggregates data from wallets, exchanges, and other platforms, giving you a full and accurate picture of your Web3 financial activity.

Fireblocks has partnered with TRES to allow you to integrate your workspace with their platform and view your Fireblocks data with more enhanced reporting capabilities. After purchasing a package from TRES, you can set up an API user and allow the TRES platform to access your Fireblocks data.

With TRES, you can:

- Completely automate your Web3 accounting, taxes, and auditing
- Create historical balance reports in any format
- Get total reconciliation across all assets over 120 networks
- Easily understand your realized gains and losses
- Get the complete breakdown of your DeFi and staking activity

---

## How to integrate with TRES

1. In the Fireblocks Console, go to **Transaction History** > **Generate report** to schedule a demo with TRES.
2. Complete the demo, then work with TRES to purchase the appropriate package and onboard to their platform.
3. After you complete onboarding with TRES, [follow the TRES documentation](#) steps to grant them read-only access to your workspace. Note that the API user you create for this purpose uses a CSR file specifically from TRES.
