Token management user experience

Overview

The Token management user experience is an interface for managing ERC-20F tokens in the Fireblocks tokenization engine. It enhances the manual contract call UI with a guided, context-aware dashboard that enables you to securely manage tokens, roles, and registries without needing to handle contract hashes or interact directly with smart contract functions.

This feature streamlines lifecycle operations such as minting, burning, or access management, and provides full transparency into token activity, balances, and governance.

Key benefits

- **Streamlined workflows:** instead of manually handling hashes, contract calls or data entry, token management can now be done directly from an intuitive dashboard.
- **Fewer errors, more confidence:** the guided UI prevents common mistakes like pasting incorrect addresses or roles, keeping operations consistent and secure.
- **Full visibility:** provides full insight into your token's supply, holders, and activity across networks without the need to rely on external tools.
- **Built-in governance:** manage permissions and access registries through Role-Based Access Control (RBAC) in one centralized place, ensuring transparency and compliance.
- **Ready for growth:** the improved user experience makes it easier for new users and non-technical teams to operate tokens confidently.

Core capabilities

 Fireblocks Help C

/

intervals

- **Multichain switch:** toggle between blockchains where the token is deployed
- **Total supply visibility:** view real-time supply and changes over time

Access registry management

Manage AllowLists and DenyLists directly from the token view:

- Search, link, or deploy a registry
- Add or remove accounts
- Vault selector automatically filters eligible accounts

Role-Based Access Control (RBAC)

Simplified management of smart contract roles:

- Grant or revoke roles (e.g., minter, burner, contract manager)
- View which vaults or external addresses hold roles
- Perform operations without *keccak* hashes or manual data entry
- Secure validation through required Contract Manager permissions

Transaction & holdings visibility

- **Transaction history:** view all token activity, including both Fireblocks-managed and external wallet transactions
- **Holdings overview:** see balances across all token holders

Supported blockchains

The token management experience is available across the following EVM-compatible networks:

Mainnets supported

- Ethereum
- Polygon
- BNB Smart Chain
- Base
- Avalanche C-Chain

/

Testnets supported

- Ethereum Sepolia
- Ethereum Holesky
- Polygon Amoy
- BNB Smart Chain Testnet
- Optimism Sepolia
- Base Sepolia
- Avalanche C-Chain Fuji
- Arbitrum Sepolia
- Monad Testnet
- Tempo Testnet

How to access

1. Go to **Tokenization Engine > Tokenization Projects**.
2. Select the **token name** to open the new **Token Management Dashboard**.
3. Manage your **roles, registries, transactions, and supply** directly from this interface.

This UI replaces the legacy “...” **management menu** for token operations.
