Transaction fee and transaction amount representation

Updated 2 years ago

Overview

Different transaction types consist of different information depending on their source, destination, and network. To see all transaction information, including the exact fee and net amount, download the Transaction Log file from the Transaction History page.

Downloading a Transaction Log CSV

Transaction Reports may be downloaded at any time from the Transaction History by following these steps:

1. Click on **Transaction History** in the left hand panel of the console.
2. Click the **Download Log icon** in the top right corner of the Transaction History page.

The transaction report

Downloadable transaction reports include, among other transaction details, the following transfer amount information:

- **Amount:** The gross amount withdrawn from an exchange.
- **Amount in USD:** The value of the transaction in USD at the time of transfer.
- **Network fee:** The transaction fee required by the blockchain network.
- **Requested amount:** The requested withdrawal amount.*
- **Net amount:** The amount sent by an exchange and transferred into a vault account.
- **Service fee:** The fee that the exchange charged for the transaction.

Fee representation from an exchange to the Fireblocks Vault

Exchanges always charge withdrawal fees. Fireblocks displays the gross withdrawal amount from an exchange, which includes both the amount withdrawn and the exchange withdrawal fee. Gross amounts display because the transaction fee often varies and is only finalized by the exchange once the transaction is complete.

Example

You create a new transfer to withdraw assets worth \$20 from an exchange account to a vault account. Fireblocks determines there is an exchange fee of \$2 and withdraws \$20 from the exchange. The selected vault account receives \$18 after fees.

Fee representation from the Fireblocks Vault

Fireblocks displays the net amount withdrawn from any vault account in your workspace unless the transaction is a *max transaction*. In such a case, the maximum amount available in a wallet is withdrawn and the fee is deducted from it.

The Transaction History page displays the gross amount withdrawn from the vault account and the network fee. The transaction report displays the requested amount, net amount, and network fee.

Max transactions for ERC-20 tokens

For ERC-20 tokens, the fee is not deducted from the requested amount in a *max transaction*, and the net transfer amount is displayed in the Transaction History page and transaction report. For these asset types, the fee is withdrawn from a separate wallet within the same vault account in your Fireblocks Vault, which must have a sufficient balance to cover the fee.

For all transactions on Ethereum or any EVM blockchain, you can enable the [Fireblocks Gas Station service](#) on your account to ensure funds are always available for transaction fees.

Multi-destination transactions

UTXO blockchains support transactions with multiple destinations. Multi-destination transactions require and display a single network fee. Learn more about [multi-destination](#)
