Unsupported and Unmapped assets

Updated 1 month ago

Overview

When viewing assets in a connected account, some assets may appear with an **Unmapped** or **Unsupported** badge. These labels indicate two distinct states that affect what you can do with that asset in Fireblocks.

Asset states

Unmapped assets

An **Unmapped** asset is available on the connected provider but has not yet been mapped to Fireblocks. Until the mapping is added, deposits and withdrawals for that asset are not available through Fireblocks.

You can submit a mapping request directly from the Fireblocks Console. Once Fireblocks processes the request, the asset becomes available for deposits and withdrawals.

Unsupported assets

An **Unsupported** asset is available on the connected provider but is not currently supported by Fireblocks. Deposits and withdrawals are not available for unsupported assets, and mapping cannot be requested.

Request mapping for an unmapped asset

If an asset is labeled **Unmapped**, you can request for its mapping by Fireblocks.

1. In your Console, navigate to **Accounts** and open the relevant connected account.
2. Locate the asset displaying the **Unmapped** badge.
3. Hover over the badge to open the asset details tooltip.

/

Note:

The **Request mapping** option only appears for assets in the **Unmapped** state. Assets labeled **Unsupported** cannot be mapped at this time.
