

Gateway

Circle Gateway

Copy page

Circle Gateway enables a unified USDC balance across multiple blockchains. Deposit USDC to non-custodial Gateway Wallet contracts on any supported source blockchain, then mint USDC instantly (<500 ms) on any destination blockchain using a single API call.

Gateway is fully permissionless, and you can start integrating with it immediately with no sign-up needed. Check out the quickstart guides for [EVM](#) and [Solana](#).

Use [Unified Balance Kit](#) to simplify Gateway integrations.

Unified Balance Kit handles deposit, transfer, and spend flows so you can build Gateway-powered features in just a few lines of code.

Key features

Unified crosschain balance

Hold USDC across multiple blockchains and access it as a single balance on any supported destination blockchain

Instant transfers

Transfer USDC in under 500 ms after your balance is established, with no waiting for source blockchain finality

Non-custodial

Retain full ownership of deposited USDC with signature-based authorization and a 7-day trustless withdrawal option

ERC-1271 contract signatures

Authorize transfers from smart contracts and smart contract wallets with ERC-1271, without requiring a

What you can build

Gateway enables applications that require instant access to USDC across blockchains. Here are some common use cases:

Chain abstraction

Crosschain liquidity

Payment routing

Treasury management

Agentic commerce

Get started

Create and transfer a unified balance

Build a script to deposit USDC on multiple blockchains and transfer it instantly to a destination blockchain

Transfer from a smart contract account

Authorize Gateway transfers with ERC-1271 using a Circle SCA

Set up webhooks

Receive real-time notifications for Gateway events on your registered wallet addresses

Supported blockchains

View the blockchains where you can deposit and mint USDC with Gateway

Attribute	CCTP	Gateway
Use case	Transfer USDC from one blockchain to another	Hold a unified USDC balance accessible on any supported blockchain
Transfer speed	Fast Transfer: ~8-20 seconds Standard Transfer: 15-19 minutes (Ethereum/L2s)	Instant (<500 ms) after balance is established
Balance model	Point-to-point transfers	Unified crosschain balance
Custody	Non-custodial	Non-custodial with 7-day trustless withdrawal option
Supported blockchains	View list	View list
