About the Deposit Control and Confirmation Policy

Updated 2 years ago

The Deposit Control and Confirmation Policy (DCCP) lets you specify how many blockchain network confirmations are required for incoming and outgoing transactions to clear so their funds can be credited to a wallet. Until a transaction clears, its deposit amount is locked in either the [inflow](#) or [outflow state](#).

After it clears, its deposit amount is accounted for in the wallet's currently available balance. Additionally, for UTXO-based blockchain networks, the transaction's outputs become immediately spendable.
