Moonbeam and Moonriver transaction support

Updated 1 year ago

Moonbeam (GLMR) and Moonriver (MOVR) are EVM-compatible parachains of Polkadot and Kusama, respectively. As such, they support both Ethereum-style and Substrate transaction types (also called *extrinsics*).

Fireblocks only supports Ethereum-style transactions on these chains. Extrinsics do not have a transaction record in Fireblocks and cannot be rescanned. If you are unsure whether Fireblocks supports your GLMR or MOVR transaction, search for the transaction hash on <https://moonscan.io> or <https://moonriver.moonscan.io>. If the record is found on one of these explorers, the transaction is supported by Fireblocks.
