Re-enrolling API users

Updated 2 days ago

Admin-level users can re-enroll an API user from the Fireblocks Console to reconnect the user to your Co-signer. You may need to re-enroll an API user if you:

- Receive errors during initial Co-signer server setup
- Pair the API user with a new or existing Co-signer instance
- Change the Co-signer Callback Handler configuration (for example, switching the authentication method)

Re-enroll an API user

To re-enroll an API user:

1. In the Fireblocks Console, go to **Settings > Users**.
2. Find the API user, then select the more actions menu () > **Re-enroll API user**.

An approval request is sent to the workspace Owner. After the Owner approves, pair the API user with your Co-signer to complete re-enrollment. The Owner must then approve the Co-signer's key shares to finish the process.

Troubleshooting

"Failed to pair device, HTTP status 500"

When this error occurs, the FATAL line in the response indicates the failure:

```
customer_cosigner:26 INFO 10/05/2022 16:00:55,908 curl/curl_utils.cpp(23
customer_cosigner:26 INFO 10/05/2022 16:00:55,908 curl/curl_utils.cpp(24
FATAL 10/05/2022 16:00:56,409 main.cpp(566) std::__cxx11::string pair_de
```

This means the API user was re-enrolled, but the pairing token expired before it was entered. The pairing token is valid for one hour after you copy it from the Console.

 Fireblocks Help C

This error means the SSL certificate on the Callback Handler server does not match the certificate on the Co-signer. The Callback Handler certificate has typically been changed or has expired.

To resolve this, re-enroll the API user, then re-pair the API user with the Co-signer so it picks up the updated certificate from the Callback Handler. After pairing, the workspace Owner must approve the Co-signer's key shares.
