About Compliance

AML Transaction Screening Policy

Note

The AML integration is a premium feature that requires an additional purchase. Reach out to [your Customer Success Manager](#) if you do not have an agreement with an AML provider or you need help enabling the feature.

Overview

The Transaction Screening Policy allows you to define which transactions to screen. When Fireblocks screens a transaction, it sends the transaction's details to your Anti-Money Laundering (AML) provider for risk analysis, AML/Counter Financing of Terrorism (AML/CFT) monitoring, and sanctions monitoring.

Fireblocks screens incoming and outgoing transactions to ensure compliance with transactional AML/CFT rules and sanctions. Fireblocks performs three types of screening operations:

- **Screen deposits to Fireblocks:** Fireblocks registers deposits to your workspace with your AML provider for risk analysis. You can choose to pass, screen, or freeze these transactions.
- **Screen withdrawals from Fireblocks:** Fireblocks receives risk information on the destination address before the withdrawal. You can choose to pass, screen, or freeze these transactions.
- **Screen transaction data for registration with AML provider:** Fireblocks registers completed transactions with your AML provider for further analysis. This can be specific venue combinations, such as vault account to vault account, or a manual re-screen of a specific transaction.

Default policy vs. custom policy

By default, the Transaction Screening Policy requires all transactions to be screened, including internal transactions. However, you can replace the default Transaction Screening Policy with a custom policy that defines which transactions are screened.

Custom policies operate on a first-match basis rule set. This means the first rule that matches the transaction's parameters is applied to the transaction, and the action specified in the rule is performed. If there is no matching rule, the transaction is not screened and is accepted automatically.

Building your Transaction Screening Policy

You can create and customize your AML Transaction Screening Policy using the steps below.

CSV Policy Upload

To get started:

1. Download the [AML Transaction Screening Policy template](#) and read the instructions on the Instructions tab.
2. Use the following [rule parameters](#) to build and customize your screening policy.

Alternative: Compliance Policy Editor (Early access)

Important:

This feature is not yet available to all customers. Contact your [Customer Success Manager](#) to learn more.

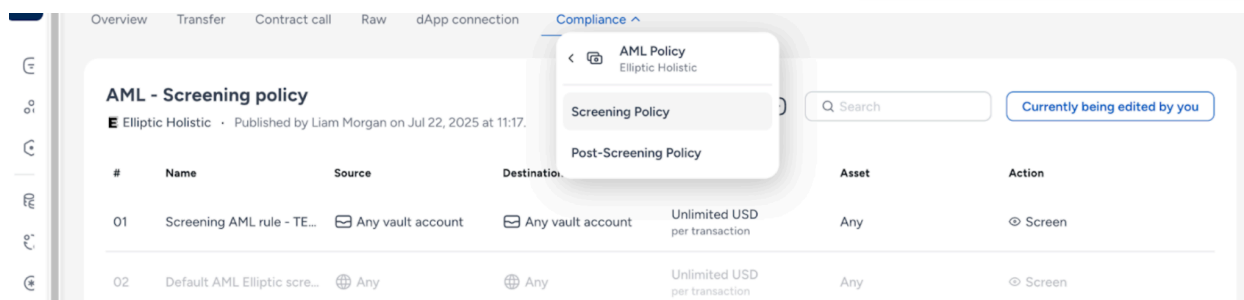

To get started, in your Fireblocks Console:

1. Navigate to **Policies > Compliance policies > AML**.
2. Connect to your provider by following the prompts.
3. Once connected, you can begin right away with the default screening rules that are automatically enabled.

Rule parameters

Source

This is the transaction's source. You can select one of the following values:

- Any
- Vault Account (e.g., Default vault account)
- Any Vault Account
- Exchange (e.g., Binance, Coinbase)
- Any Exchange
- Unknown—used for non-whitelisted external addresses
- Network connection
- Any Network connection
- Any Unmanaged Wallet—used in conjunction with a [Customer Reference ID](#)

Source Subtype

When you select a specific source type, such as **Vault Account** or **Exchange**, you must enter the source's name in this field.

Leave this field blank when you select an "Any" source type.

Destination

This is the transaction's destination. You can select one of the following values:

- Any
- Vault Account (e.g., Default vault account)
- Any Vault Account
- Exchange (e.g., Binance, Coinbase)

/

Note

The **Any Unmanaged Wallet** value refers to any whitelisted wallet address not managed by Fireblocks.

Destination Subtype

When you select a specific destination type, such as **Vault Account** or **Exchange**, you must enter the destination's name in this field.

Leave this field blank when you select an "Any" destination type.

Amount/AmountUSD

This is the minimum asset quantity or dollar amount a transaction value must exceed to trigger the rule. You can enter one of the following values:

- **Amount:** The quantity of an asset. When you create rules using asset amounts, this field's asset value and the **Asset** field's value must match (e.g., > 0.01 ETH, ETH).
- **AmountUSD:** The US dollar amount (e.g., > \$200).

Asset

This is the asset to which you want to apply the rule. You can specify a single asset by entering it as its [AssetID on Fireblocks](#), or you can enter **Any** to apply the rule to all assets in your workspace.

Make sure to list only assets your AML provider supports.

Action

This is the action Fireblocks performs when the rule is triggered. You can select one of the following:

- **Screen:** Screen the transaction and submit its details to your AML provider for risk analysis and monitoring.
- **Pass:** Skip screening and accept the transaction.
- **Freeze:** [Freeze the transaction's assets](#) in your workspace so they cannot be spent. Remember, transactions frozen by this action need to be [unfrozen manually](#) by an Admin-level user.

Example policy

Important

We provide you with an example of a Transaction Screening Policy below to demonstrate its capabilities and formatting. However, we will not provide a policy for you to copy and use.

If you need help building a policy, we recommend contacting your AML provider. They may have compliance experts as part of their team to assist you.

Rule	Source	Source Subtype	Destination	Destination Subtype	Amount/ Amount USD	Asset	Action
1	Any Vault Account		Any Vault Account		Any	Any	Pass
2	Any		Vault Account	Default vault account	Any	Any	Screen
3	Exchange	Binance	Vault Account	Vault 2	Any	BTC	Screen
4	Any		Any Unmanaged Wallet	0x5...394	> 0.01 ETH	ETH	Screen
5	Vault Account	Default vault account	Any		Any	BTC	Screen
6	Any Exchange		Any		> \$200	ETH	Screen
7	Any		Any		Any	Any	Pass

1. Skip screening on internal vault account-to-vault account transactions.
2. Screen any incoming transactions to the Default vault account.

/

6. Screen any incoming ETH transactions greater than \$200 from any exchange.
7. Skip screening on all other transactions.

Uploading your Transaction Screening Policy - CSV Policy

To upload your workspace's AML Transaction Screening Policy, go to **Settings** > **Compliance** and select your AML provider. Then select **Change policy**  in the Screening row, and upload the template with your custom policy.
