Cold Wallet Workspace Management

Connecting Cold Wallet with hot workspaces using the Fireblocks P2P Network

Before you begin connecting your Cold Wallet (CW) and hot workspaces read the [overview of the Fireblocks P2P Network article](#) to get familiar with the feature.

We recommend to start connecting your workspaces from your hot environment because you will be able to configure Flexible Network Routing.

Update: Flexible Routing Now Available for Cold Wallet (Early Availability)

Cold Wallet workspaces can now enable the newer P2P Network experience, including flexible routing. Contact your Customer Success Manager to enable this feature. To learn more, see [Cold Wallet Enhanced Console Experience](#).

Note: Without this feature enabled, flexible routing is not available for Cold Wallet workspaces.

After you set up your Network profile in your hot workspace, you can connect to your CW account. Adding a connection requires approval from your Admin Quorum within each workspace. Once approved, you can transfer assets using the Network connection as a transaction destination.

You can follow the instructions [in this article](#) or below to create a Network connection. Keep in mind that you're making a connection between your own workspaces.

1. In your *Cold Wallet* Fireblocks Console, go to the **Network** page.
2. Find the Network Profile you would like to use and copy the **Profile ID**. You can use the default channel or create a new one for this specific connection.
3. In your *Hot Wallet* Fireblocks Console, go to the **Network** page.
