Create a Policy

Updated 5 months ago

Overview

You can use the Fireblocks Console to create Policies customized to your organization's financial security needs. Before you begin, however, you must review the section below and the [About Policies](#) article. If you have any questions, contact your Customer Success Manager or email the [Fireblocks CSM Team](#).

Before creating your Policy

- Read [Policy examples](#) for helpful templates and use-case guidance.
- Review the [Policy best practices](#) for important tips and reminders.
- Apply rules to specific users, including API users, and make sure to [create and configure each user](#) before creating the rules.
- Set up any source or destination in your workspace that you wish to use in a rule before creating the rule.

For more information, see the recommendations that are listed in the same group, and similar workspace roles. To change a user's role, [contact Fireblocks Support](#).

Please note the following:

- Only the workspace Owner or Admin-level users can create Policy rules.
- Policies can only be edited by one person at any given time.
- The Policy Editor automatically times out after 30 minutes of inactivity.
- If you plan to perform Web3 operations, we recommend [creating a DeFi policy](#).

Create a Policy

The **Policies** page in your Console has two sections: Active and Unconfigured policies. Initially, both sections appear under an Overview tab, but each activated Policy creates its own tab at the top of the page. Follow the steps below for each section.

Active policies

This section allows you to view all currently active Policy types (or categories). To add rules to your active Policies:

1. In the Fireblocks Console, select **Policies** in the left navigation panel.
2. Under the Active policies section, choose the Policy type (e.g., Transfer), then select **Edit policy**.

in the Policy following [the first-match principle](#).

5. Review your changes, and then select **Publish policy** to submit your changes to the approval group assigned to Policy changes. [Learn to publish your Policies](#).

Note

Saved Policy drafts don't affect your active Policies.

Unconfigured policies

Create a Policy from this section that displays all Policy types that have not yet been activated:

1. In the Fireblocks Console, go to **Policies** in the left navigation panel.
2. Under the Unconfigured policies section, select the Policy type you want to create (e.g., **+Add Stake policy**).
3. [Follow steps 3 to 5 above](#).

Note

If you see error messages while creating or editing rules, see [Policy rule error messages](#) for guidance on resolving them.

Next steps

- [Publish a Policy](#) - Submit your changes for approval and activate your rules
- [Edit a Policy](#) - Make changes to existing rules when needed
- [Policy Best Practices](#) - Follow recommendations for effective Policy management
- [Policy Rule Parameters](#) - Reference guide for all available parameters
- [Policy Rule Examples](#) - Review some common use cases
- [Policy Rule Error Messages](#) - Troubleshoot error messages when creating or editing rules
