Manage vault accounts

Updated 1 month ago

Overview of vault accounts

Vault accounts are the top-level containers for your digital assets in Fireblocks. This article covers how to create, find, rename, archive, and hide vault accounts.

Create a vault account

Via the Fireblocks Console

1. Go to **Accounts > Vault**.
2. Select **Create vault account**.
3. On the Create Vault Account dialog, enter the account name in the **Account name** field. Vault account names must consist only of ASCII characters.
4. Select **Auto-fuel with gas after an incoming transaction completes** if applicable. For more information, see [Fireblocks Gas Station](#).
5. Select **Create**.

Via the Fireblocks API

Use the following endpoint and SDKs to create a single vault account:

- [Create a new vault account](#)
- [TypeScript SDK](#)
- [Python SDK](#)
- [Java SDK](#)

Create vault accounts in bulk

You can use the Fireblocks API to create up to 10,000 vault accounts in a single operation.

Use the following endpoint and SDKs to create vault accounts in bulk:

- [Bulk creation of new vault accounts](#)

Find a vault account

Use the search bar on the Vault page to find any vault account by name or deposit address. You can also open a vault account and use the search bar to find asset names, asset symbols, blockchains, or any deposit address within that account.

When searching for a deposit address, you can use permanent addresses and other addresses, as well as memos, notes, and tags for assets that support those fields. For assets that support multiple address formats, you can search using SegWit, Legacy, or any other available format. Searching by address description is not supported for assets that support multiple addresses.

Rename a vault account

You can rename a vault account at any time. Vault account names don't affect any asset wallets or deposit addresses within the account.

1. Go to **Accounts > Vault**.
2. Find the vault account you want to rename and select **More actions (...)** > **Rename**.
3. On the Rename vault account dialog, enter the new name.
4. Select **Rename**.

You cannot rename P2P Network vault accounts

These accounts display a Fireblocks Network badge  on them.

Archive or unarchive a vault account

Don't see what you're looking for? Log in for the full Help Center experience

 Fireblocks Help C

- Archived accounts can still receive incoming transactions. When this happens, the account is automatically unarchived.
- You cannot select an archived account in the Console as a transaction's source or destination. However, archived accounts are always available via the Fireblocks API.
- Archived accounts are not included in your Vault's balance chart.
- Transactions involving archived accounts still appear in your transaction history.
- You cannot archive accounts linked to Fireblocks Network connections.

Archive a vault account

1. Go to **Accounts > Vault**.
2. Find the vault account you want to archive, then select **More actions (...)** > **Archive**.
3. Select **Archive**.

Unarchive a vault account

1. Go to **Accounts > Vault**.
2. Select **Show archived** to see all archived accounts.
3. Select **Unarchive** for the appropriate account.

Hide or unhide a vault account

Hiding a vault account removes it from view in the Fireblocks Console while keeping it fully accessible via the Fireblocks API. Unlike archiving, hiding an account does not unarchive it when the account receives an incoming transaction.

Important notes about hidden accounts

- Hidden accounts can still receive incoming transactions. This does not unhide the account. These transactions don't appear in your Recent Activity panel, but you can view them in your transaction history.
- You cannot select a hidden account in the Console as a transaction's source or destination. However, hidden accounts are always available via the Fireblocks API.
- Hidden accounts are not included in your Vault's balance chart.
- Transactions involving hidden accounts still appear in your transaction history.

To check a vault account's `hiddenOnUI` status, use the following endpoints:

- [Get vault account by ID](#) (for a single account)
- [Get vault accounts \(paginated\)](#) (for multiple accounts)

Archive vs. hide: which should you use?

Both archiving and hiding remove vault accounts from your active Console view, but they serve different use cases. Use the table below to decide which approach fits your situation.

	Archive	Hide
Best for	Workspaces with fewer than 100 accounts, accessed primarily via the Console	Workspaces with thousands or millions of accounts, accessed primarily via the API
Incoming transactions	Automatically unarchives the account	Account stays hidden
Console visibility	Hidden unless you select Show archived	Not visible in the Console
API availability	Always available	Always available
Included in balance chart	No	No
Transactions in history	Yes	Yes
Can transact via Console	No	No
How to perform	Console or API	API only
