Publish a Policy

Updated 18 days ago

How to publish a policy

After you finish creating, editing, or restoring a Policy:

1. Select **Publish policy**. You must have at least one edited, added, or removed rule to submit changes.
2. A limited summary of the submitted policy details appears.

Publish Approve policy 

Rules

Allow	Block	Request approval

This updated policy will take effect upon approval by the admin quorum through the Fireblocks mobile app.

Cancel

Publish Approve policy 

3. Select **Publish policy** for your specific policy type (e.g., Transfer) to send the Policy to the assigned approval group for approval.

Approving a new or edited Policy

Important

Policy approvers must have the latest version of the Fireblocks mobile app installed to ensure full functionality and access to approval workflows. Additionally, if the policy is

When approved, the new or edited Policy can appear in the next version of the Policy details. Users in the group will also see the **Pending approval** indicator in the Console.

To approve the new or edited Policy:

1. In the Fireblocks Console, go to **Policies** and select the new or edited Policy. The yellow **Pending approval** badge indicates there are changes to review.

2. Select **Review changes**. Rules will appear the same as when you are viewing draft changes.
3. Select **Approve policy**.
4. Complete the approval process using your Fireblocks mobile app. The Policy becomes active immediately.

If you select **Deny changes**, you can enter a reason that will be logged in the Audit Log.

When Policy changes are denied, the submitter can resubmit Policy changes based on the feedback in the denial notification.

- When the submitter enters the Policy Editor, the submitter's denied changes still appear in the Policy Editor so they can pick up where they left off.
- After submitting a new request, the yellow **Pending approval** badge appears.
- The submitter can't draft more edits until the new request is approved or denied.

editing your policy draft, you can now publish multiple policies in one click:

1. Select **Publish Policy**.
2. Select **Multi-Publish in one request** and then select the policy types you want to publish.
3. Select **Add**.
4. Select **Publish** to publish the policy.

Note:

Administrators can only approve or reject policies that were sent for publication.

See the following images as an illustration of the publication sequence:
