Backup & Recovery

Native workspace key backup solution

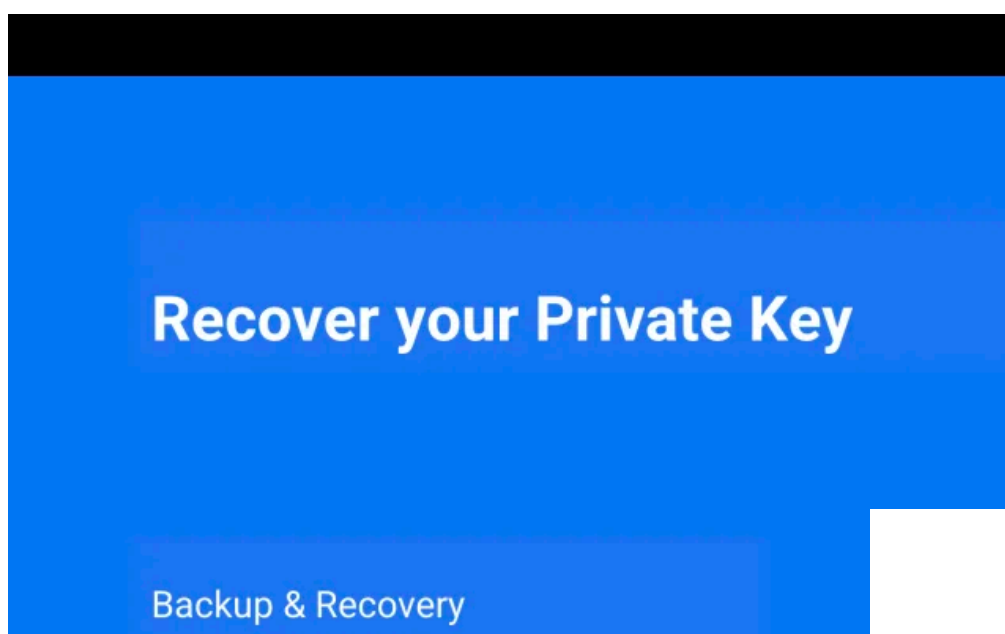

Recovering private key material

Before you begin

Warning

- You should never perform this procedure unless a disaster event has occurred and you need to reconstruct your workspace.
- This procedure reconstructs your private key material. Perform this procedure only on an **offline machine**. Performing this procedure on an online machine will result in your private key being considered exposed and compromised.

Recovering your workspace's private key material

drive, and then install it offline. Do not connect the offline machine to any network during this process). You can also select **Recover** from the left menu.

2. Complete the following fields:

- a. **Recovery Kit:** Drop or select the full recovery kit ZIP file that you generated or that you received from Fireblocks.
- b. **Recovery Private Key:** Drop or select the private key file corresponding to the public key used to encrypt the recovery package.
- c. **Mobile App Recovery Passphrase:** Enter the workspace Owner's recovery passphrase. Alternatively, you can upload this passphrase from a .json file (Recovery Utility v1.8.0+). See [Upload Passphrase .JSON File](#).
- d. **Recovery Private Key Passphrase:** Enter the passphrase set for the private key file. Alternatively, you can upload this passphrase from a .json file (Recovery Utility v1.8.0+). See [Upload Passphrase .JSON File](#).

3. Select **Recover**.

After the verification process is complete, the **Accounts** page opens. You can reconstruct your workspace here.

Use auto-generated passphrase

If you auto-generated a passphrase during your workspace's initial setup, select the **Use auto-generated passphrase** checkbox. Selecting this option causes the following changes:

- The **Mobile App Recovery Passphrase** field changes to the *Auto-Generate Private Key Passphrase* field.
- The **Auto-Generated Passphrase Private Key** field appears.

In the **Auto-Generate Private Key Passphrase** field, enter the auto-generated passphrase set for the private key file.

In the **Auto-Generated Passphrase Private Key** field, drop or select the private key file corresponding to the public key used to encrypt the auto-generated passphrase file.

Recovery Tool – Upload Passphrase .JSON File

(Supported starting from Recovery Utility version 1.8.0)

As an alternative to manually entering the **Mobile App Recovery Passphrase** and the **Recovery Private Key Passphrase**, you can upload them using a .json file.

- **passphrase**: The Fireblocks Mobile App Recovery Passphrase of the **workspace Owner**.
- **rsaKeyPassphrase**: The Recovery Private Key Passphrase (RSA private key passphrase).

Steps:

1. In the Recovery Utility app, navigate to **Recover**.
2. Select **Upload Passphrase JSON File**. You can either drag and drop or manually select the **.json** file.

The screenshot shows the 'Fireblocks Recovery Utility' application window. On the left is a sidebar with navigation options: Recovery Utility, Accounts, NCW, Import / Export, Set Up, Verify, Recover (highlighted in red), Extended Keys, Raw Signing, and Settings. The main content area is titled 'Recover Private Keys' and includes a warning: 'Using private key recovery exposes your private keys to this system. Only do this in a disaster recovery scenario, and then move your assets to other secure wallets. Use the Fireblocks Console, APIs, and SDKs for standard operations.' Below the warning are four input fields: 'Recovery Kit .ZIP' and 'Recovery Private Key .KEY / .PEM' (both with 'Drop or select file' buttons), 'Mobile App Recovery Passphrase' (with an eye icon), and 'Recovery Private Key Passphrase' (with an eye icon). A note below the passphrase fields states 'Set by the workspace owner during onboarding'. There are two checkboxes: 'Use auto-generated passphrase' and 'Recover Non-Custodial Wallets (Embedded) only'. An 'OR' separator is present. At the bottom, there is an 'Upload Passphrase JSON File .JSON' section with a 'Drop or select file' button. A blue 'Recover' button is located at the bottom right of the main content area.

3. A file selection window opens. Select the **.json** file and select **Open**.
 - Make sure the field names match the format shown above.
4. The app then automatically loads your passphrases. Once both the **Recovery Kit** and the **Recovery Private Key** are loaded, you can complete the recovery process.
