Automation rule example: service fee collection

Updated 1 year ago

Note

Automation is a premium feature that requires an additional purchase. If you don't have access to this feature, contact your [Customer Success Manager](#) to discuss enabling in your Fireblocks workspace. [Learn more about Automation.](#)

Overview

This guide explains how to create an Automation rule in Fireblocks that collects and transfers a percentage of specific transactions. Multiple triggers and conditions are available for this action. The example below shows how to set up a rule that collects 3% of all incoming transactions above \$10 to a specific vault account.

Creating an Automation rule for collecting a service fee from incoming transactions

The following parameters are suggestions for this rule. Adjust them to suit your needs.

1. In the Fireblocks Console, go to the Automation page and select **Create automation**.
2. Enter a name for the rule in the top-left corner.
3. Select **Transaction** as the trigger.
4. Select a **Source**, **Destination**, and **asset**. You may optionally select a blockchain. The example below triggers the automation for every incoming transaction to the selected vault account
5. Select **Save changes** to edit the condition.
