Bittrex account

Updated 8 months ago

Configuring your Bittrex account

To configure your Bittrex account to connect to Fireblocks:

1. Refer to the [Bittrex.com API Documentation](#) to learn how to generate an API key.
2. When prompted to do so, name your new API Key "Fireblocks."
3. After you confirm the validity of your new API key, copy and keep a record of both the Key and Secret. You will need them when adding this exchange to your workspace.
4. Under IP Whitelisting, delete the 0.0.0.0 address, and then add the following IP address: 52.76.208.129.

Configuring Fireblocks

1. In the Fireblocks Console, go to **Accounts > Connected accounts**.
2. Select **+ Connect Account**.
3. Select **Bittrex**, and then complete the following fields:
 - a. **Name on Fireblocks**: Enter the name you want to give this exchange account on Fireblocks.
 - b. **Key**: Enter the key that you saved from Bittrex.
 - c. **Secret**: Enter the Secret that you saved from Bittrex.
 - d. Select **Connect Account**.

The [Admin Quorum](#) must approve the new account to make it available for new transfers from your workspace.

Your Bittrex account appears on the Exchanges page along with all managed assets and their balances. Following Admin Quorum approval, transfers are available from your vault accounts, whitelisted addresses, Fireblocks P2P Network connections, and other connected exchange accounts to your Bittrex account.
