Connecting The Kingdom Bank (TKB) account

Updated 8 months ago

Overview

Connecting a TKB (The Kingdom Bank) account allows you to send, receive, and manage EUR directly from your Fireblocks workspace. TKB accounts can only hold and transfer EUR and no other fiat currencies.

Before you begin

Make sure you have an active, dedicated TKB bank account issued by TKB before you continue the connection process. Then obtain your API keys from your TKB portal. If you have trouble requesting a dedicated bank account or need help obtaining your API keys, contact TKB support via [email](#).

In order to connect your TKB account:

- You must be the account owner or administrator
- The API secret must be 2FA-protected

Adding a TKB account to your workspace

To add a TKB account to your workspace:

1. Go to **My Funds > Accounts > Fiat**.
2. Select **+ Fiat Account**.
3. On the Connect Fiat Account dialog, select **The Kingdom Bank**.
4. Complete the following fields:

Don't see what you're looking for? Log in for the full Help Center experience

 Fireblocks Help C

5. Select **Connect Account**.

The [Admin Quorum](#) must approve the new account to make it available for new transfers in your workspace.

Transferring funds with TKB

After you connect your TKB account to your Fireblocks workspace, you can [transfer](#) TKB funds to exchanges that support SEPA payments. All transfers to and from your connected TKB accounts will appear in the Recent activity panel and your Transaction History.

Whitelisting TKB account addresses

TKB wallet IDs can be whitelisted like any other external address. Whitelisted addresses are useful for transferring funds to counterparties that are not connected via the Fireblocks P2P Network.

To whitelist a new TKB account address, follow these instructions:

1. Go to **Whitelisted Addresses**.
2. Either [create a new whitelisted wallet](#) or select an existing wallet.
3. Select **+Whitelisted Address** in the top right-hand corner. If the wallet is empty, select **Add Address** in the center of the page.
4. Select **EUR (IBAN)**.
5. Enter the **holder name**, **IBAN**, and **address details**.
 - **Note:** The country field requires an ISO 3166-1 alpha-2 code, not a country name.

6. Select **Submit for Approval**.

The [Admin quorum](#) must approve the new whitelisted address before transfers may be sent to it from your workspace.
