Creating an automation user

Updated 10 months ago

Note

Automation is a premium feature that requires an additional purchase. If you don't have access to this feature, contact your [Customer Success Manager](#) to discuss having it enabled in your Fireblocks workspace.

1. In the Fireblocks Console, go to **Settings > Users**.
2. Select **Add user**.
3. Select **Automation user**.
4. Enter a name for the user.
 - The automation user is automatically assigned the Editor role and cannot be changed.
5. Select **Add user**.
6. The Owner and the Admin Quorum, or the assigned approval group, receive a request to approve the user on their mobile devices. The approval threshold must be met within seven days before the automation user becomes active in your workspace.
